A Naked Singularity English Edition:

Numerical Relativity Masaru Shibata, 2015-11-05 This book is composed of two parts First part describes basics in numerical relativity that is the formulations and methods for a solution of Einstein's equation and general relativistic matter field equations This part will be helpful for beginners of numerical relativity who would like to understand the content of numerical relativity and its background The second part focuses on the application of numerical relativity A wide variety of scientific numerical results are introduced focusing in particular on the merger of binary neutron stars and black holes

Springer Handbook of Spacetime Abhay Ashtekar, Vesselin Petkov, 2014-09-01 The Springer Handbook of Spacetime is dedicated to the ground breaking paradigm shifts embodied in the two relativity theories and describes in detail the profound reshaping of physical sciences they ushered in It includes in a single volume chapters on foundations on the underlying mathematics on physical and astrophysical implications experimental evidence and cosmological predictions as well as chapters on efforts to unify general relativity and quantum physics The Handbook can be used as a desk reference by researchers in a wide variety of fields not only by specialists in relativity but also by researchers in related areas that either grew out of or are deeply influenced by the two relativity theories cosmology astronomy and astrophysics high energy physics quantum field theory mathematics and philosophy of science It should also serve as a valuable resource for graduate students and young researchers entering these areas and for instructors who teach courses on these subjects The Handbook is divided into six parts Part A Introduction to Spacetime Structure Part B Foundational Issues Part C Spacetime Structure and Mathematics Part D Confronting Relativity theories with observations Part E General relativity and the universe Part F Spacetime beyond Einstein

Gravitation: Following The Prague Inspiration: A Volume In Celebration Of The 60th Birthday Of Jiri Bicak J Podolsky, O Semerak, M Zofka, 2002-08-13 This volume is dedicated to Jiri Bi k on the occasion of his 60th birthday The authors are his former students who currently work in the fields of general relativity astrophysics theoretical physics and cosmology Unlike in traditional Festschriften with many short contributions they present several comprehensive surveys and elaborate original works The subjects range from the motion of stars in galactic nuclei to quantum mechanics on a boundary and include current topics such as cosmological perturbations effects of a repulsive cosmological constant discs around black holes and gravitational waves An unconventional introductory essay revives Prague's inspirations as personified by Tycho Brahe Johannes Kepler Christian Doppler Ernst Mach Albert Einstein and others

Issues in General Physics Research: 2011 Edition, 2012-01-09 Issues in General Physics Research 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about General Physics Research The editors have built Issues in General Physics Research 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about General Physics Research in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in General Physics Research 2011 Edition has been

produced by the world's leading scientists, engineers, analysts, research institutions and companies. All of the content is from peer-reviewed sources and all of it is written, assembled and edited by the editors at ScholarlyEditions and available exclusively from us. Fluid Flows to Black Holes D. J. Saikia, Virginia Trimble, Subrahmanyan Chandrasekhar, 2011. This unique book contains reviews by leading experts in areas which Prof Chandrasekhar pioneered as well as a historical perspective, a biographical portrait and personal reminiscences. The reviews, which first appeared in the Bulletin of the Astronomical Society of India, include papers presented by scholars at the Chandrasekhar Centennial Symposium held in the University of Chicago on 15-17 October 2010 and some additional reviews by other distinguished astrophysicists covering topics not represented at the conference. This volume provides a glimpse into some of the most exciting areas of modern astrophysics as a fitting tribute to Prof Chandrasekhar on his birth centenary.

Recent Developments in General Relativity B. Casciaro, D. Fortunato, M. Francaviglia, A. Masiello, 2011-06-28. The 13th Italian Conference on General Relativity and Gravitational Physics was held in Cala Corvino Monopoli Bari from September 21 to September 25, 1998. The Conference, which is held every other year in different Italian locations, has brought together as in the earlier conferences in this series those scientists who are interested and actively work in all aspects of general relativity from both the mathematical and the physical points of view from classical theories of gravitation to quantum gravity from relativistic astrophysics and cosmology to experiments in gravitation. About 70 participants came from Departments of Astronomy and Astrophysics, Departments of Mathematics and Departments of Experimental and Theoretical Physics from all over the Country. In addition, a few Italian scientists working abroad kindly accepted invitations from the Scientific Committee. The good wishes of the University and of the Politecnico di Bari were conveyed by the director of Dipartimento Interuniversitario di Matematica Prof. Franco Altomare. These proceedings contain the contributions of the two winners of the SIGRAV prizes, the invited talks presented at the Conference and most of the contributed talks. We thank all of our colleagues who did their best to prepare their manuscripts. The pleasant atmosphere induced by the beauty of the place was greatly enhanced not only by the participation of so many colleagues who had lively discussions about science well beyond Conference hours but also by the feeling of hospitality extended to the participants by the staff of the Cala Corvino Hotel where the Conference was held.

Cosmic Catastrophes J. Craig Wheeler, 2007-01-04. From supernovae and gamma-ray bursts to the accelerating Universe, this is an exploration of the intellectual threads that lead to some of the most exciting ideas in modern astrophysics and cosmology. This fully updated second edition incorporates new material on binary stars, black holes, gamma-ray bursts, wormholes, quantum gravity and string theory. It covers the origins of stars and their evolution, the mechanisms responsible for supernovae and their progeny, neutron stars and black holes. It examines the theoretical ideas behind black holes and their manifestation in observational astronomy and presents neutron stars in all their variety known.

today This book also covers the physics of the twentieth century discussing quantum theory and Einstein's gravity how these two theories collide and the prospects for their reconciliation in the twenty first century This will be essential reading for undergraduate students in astronomy and astrophysics and an excellent accessible introduction for a wider audience
