MATHEMATICS

FOR JEE MAIN AND ADVANCED

ALGEBRA-II

Sanjay Mishra

'Fundamentals of Mathematics' is a series of seven books, which are designed to provide comprehensive study material on specific areas in mathematics. It is an ideal companion for students who would like to master a particular subject area based on their individual requirements. All books in this series provide extensive coverage of the topics supported by numerous solved examples. The concepts are explained in a meticulously manner with ample illustrations and practice exercises (with answers). Overall these books enable quick learning and aid thorough preparation to crack the various engineering entrance examinations.

SALIENT FEATURES

- Collection of more than 2000 subjective and objective questions
- Comprehensive coverage of topics—Matrices, Determinants, Vectors, 3D-Geometry, Complex Numbers and Probability.
- Tutorial exercises at the end of each chapter as per the latest format of the JEE (Main and Advanced)

Linear Algebra And Optimization With Applications To Machine Learning - Volume Ii: Fundamentals Of Optimization Theory With Applications To Machine Learning Jean H Gallier,Jocelyn Quaintance,2020-03-16 Volume 2 applies the linear algebra concepts presented in Volume 1 to optimization problems which frequently occur throughout machine learning This book blends theory with practice by not only carefully discussing the mathematical underpinnings of each optimization technique but by applying these techniques to linear programming support vector machines SVM principal component analysis PCA and ridge regression Volume 2 begins by discussing preliminary concepts of optimization theory such as metric spaces derivatives and the Lagrange multiplier technique for finding extrema of real valued functions The focus then shifts to the special case of optimizing a linear function over a region determined by affine constraints namely linear programming Highlights include careful derivations and applications of the simplex algorithm the dual simplex algorithm and the primal dual algorithm The theoretical heart of this book is the mathematically rigorous presentation of various nonlinear optimization methods including but not limited to gradient descent the Karush Kuhn Tucker KKT conditions Lagrangian duality alternating direction method of multipliers ADMM and the kernel method These methods are carefully applied to hard margin SVM soft margin SVM kernel PCA ridge regression lasso regression and elastic net regression Matlab programs implementing these methods are included

Community College Mathematics Brian Cafarella,2022-06-29 This book explores the rich history of community college math with a specific focus on gatekeeper math classes Gatekeeper math classes include courses such as college algebra introduction to statistics and all developmental math classes For community colleges successful completion of these classes is imperative for student retention This book presents a decade by decade analysis of the history of community college mathematics The author employs a mix of conceptual empirical and quantitative research The empirical research stems from interviews with 30 community college

faculty members from seven community colleges From the 1970s to the pandemic in the early 2020s the book explores math curricula as well as trends initiatives teaching practices and mandates that have impacted community college math The positives and negatives of such trends initiatives and mandates are presented along with suggestions on how to apply such knowledge going forward The author addresses the key questions How can we build a future model for community college gatekeeper math classes that is both successful and sustainable Additionally how can we learn from the past and the present to build such a model This book will be ideal for students in graduate programs focusing on community college leadership or developmental education leadership as well as all those hoping to improve success rates in community college mathematics programs

Fundamentals of Scientific Computing Bertil Gustafsson, 2011-06-11 The book of nature is written in the language of mathematics Galileo Galilei How is it possible to predict weather patterns for tomorrow with access solely to today's weather data And how is it possible to predict the aerodynamic behavior of an aircraft that has yet to be built The answer is computer simulations based on mathematical models sets of equations that describe the underlying physical properties However these equations are usually much too complicated to solve either by the smartest mathematician or the largest supercomputer This problem is overcome by constructing an approximation a numerical model with a simpler structure can be translated into a program that tells the computer how to carry out the simulation This book conveys the fundamentals of mathematical models numerical methods and algorithms Opening with a tutorial on mathematical models and analysis it proceeds to introduce the most important classes of numerical methods with finite element finite difference and spectral methods as central tools The concluding section describes applications in physics and engineering including wave propagation heat conduction and fluid dynamics Also covered are the principles of computers and programming including MATLAB
