F.12 Exercises

1.6

1. Let $z = 5 + i9$. Find z^{-1} .

$$(5 + i9)^{-1} = \frac{5}{106} - \frac{9}{106}i$$

2. Let $z = 2 + i7$ and let $w = 3 - i8$. Find zw , $z + w$, z^2 , and w/z .

$$62 + 5i, 5 - i, -45 + 28i, \text{ and } -\frac{29}{25} - \frac{23}{25}i.$$

3. Give the complete solution to $x^4 + 16 = 0$.

$$x^4 + 16 = 0, \text{ Solution is: } (1 - i)\sqrt{2}, -(1 + i)\sqrt{2}, (1 - i)\sqrt{2}, (1 + i)\sqrt{2}.$$

4. Graph the complex cube roots of 8 in the complex plane. Do the same for the four fourth roots of 16.

The cube roots are the solutions to $z^3 + 8 = 0$, Solution is: $i\sqrt{3} + 1, 1 - i\sqrt{3}, -2$

The fourth roots are the solutions to $z^4 + 16 = 0$, Solution is:

$$(1 - i)\sqrt{2}, -(1 + i)\sqrt{2}, (1 - i)\sqrt{2}, (1 + i)$$

$\sqrt{2}$. When you graph these, you will have three equally spaced points on the circle of radius 2 for the cube roots and you will have four equally spaced points on the circle of radius 2 for the fourth roots. Here are pictures which should result.

5. If z is a complex number, show there exists ω a complex number with $|\omega| = 1$ and $\omega z = |z|$.

If $z = 0$, let $\omega = 1$. If $z \neq 0$, let $\omega = \frac{\bar{z}}{|z|}$

6. De Moivre's theorem says $[r(\cos t + i \sin t)]^n = r^n (\cos nt + i \sin nt)$ for n a positive integer. Does this formula continue to hold for all integers, n , even negative integers? Explain.

Yes, it holds for all integers. First of all, it clearly holds if $n = 0$. Suppose now that n is a negative integer. Then $-n > 0$ and so

$$[r(\cos t + i \sin t)]^n = \frac{1}{[r(\cos t + i \sin t)]^{-n}} = \frac{1}{r^{-n} (\cos (-nt) + i \sin (-nt))}$$

Gareth Williams, 2005 *Linear Algebra with Applications* Fifth Edition by Gareth Williams is designed for math and engineering students taking an introductory course in linear algebra. It provides a flexible blend of theory, important numerical techniques, and interesting applications in a range of fields. Instructors can select topics that give the course the desired emphasis and include other areas as general reading assignments to give students a broad exposure to the field.

Forthcoming Books Rose Arny, 2003 **Philosophy of Mathematics** Ahmet Cevik, 2021-11-09 The philosophy of mathematics is an exciting subject. *Philosophy of Mathematics: Classic and Contemporary Studies* explores the foundations of mathematical thought. The aim of this book is to encourage young mathematicians to think about the philosophical issues behind fundamental concepts and about different views on mathematical objects and mathematical knowledge. With this new approach, the author rekindles an interest in philosophical subjects surrounding the foundations of mathematics. He offers the mathematical motivations behind the topics under debate. He introduces various philosophical positions ranging from the classic views to more contemporary ones, including subjects which are more engaged with mathematical logic. Most books on philosophy of mathematics have little to no focus on the effects of philosophical views on mathematical practice and no concern on giving crucial mathematical results and their philosophical relevance, consequences, reasons, etc. This book fills this gap. The book can be used as a textbook for a one semester or even one year course on philosophy of mathematics. Other textbooks on the philosophy of mathematics are aimed at philosophers. This book is aimed at mathematicians. Since the author is a mathematician, it is a valuable addition to the literature. Mark Balaguer, California State University, Los Angeles. There are not many such texts available for mathematics students. I applaud efforts to foster the dialogue between mathematics and philosophy. Michele Friend, George Washington University and CNRS, Lille, France.

Introduction To Algebra Dr. T. N. Purohit, Algebra is the branch of mathematics where symbols or variables are used to represent numbers and quantities, allowing us to express and solve general relationships rather than just specific numerical cases. It extends arithmetic by introducing variables like x , y , etc. and studying equations, expressions, and functions involving these symbols. At the elementary level, algebra helps in solving linear and quadratic equations and manipulating formulas in more advanced forms. Modern or abstract algebra deals with algebraic structures like groups, rings, fields, and so on. Definitions of variables, constants, expressions, and equations. Order of operations and how to evaluate. Simplify expressions. Rules for arithmetic with positive and negative numbers. Use and manipulation of brackets, parentheses, distributive property, combining like terms. Solving linear equations in one variable. Understanding and using inequalities. Working with exponents, including negative and fractional exponents. Factorization of polynomials, finding common factors, and simple factoring techniques. Graphing linear functions and interpreting their meaning: slope, intercept.
