Asynchronous Circuit Design for VLSI Signal Processing Teresa H. Meng, Sharad Malik, 2011-06-27 Asynchronous Circuit Design for VLSI Signal Processing is a collection of research papers on recent advances in the area of specification design and analysis of asynchronous circuits and systems. This interest in designing digital computing systems without a global clock is prompted by the ever growing difficulty in adopting global synchronization as the only efficient means to system timing. Asynchronous circuits and systems have long held interest for circuit designers and researchers alike because of the inherent challenge involved in designing these circuits as well as developing design techniques for them. The frontier research in this area can be traced back to Huffman's publications The Synthesis of Sequential Switching Circuits in 1954 followed by Unger's book Asynchronous Sequential Switching Circuits in 1969 where a theoretical foundation for handling logic hazards was established. In the last few years a growing number of researchers have joined force in unveiling the mystery of designing correct asynchronous circuits and better yet have produced several alternatives in automatic synthesis and verification of such circuits. This collection of research papers represents a balanced view of current research efforts in the design synthesis and verification of asynchronous systems.

Multiscale Optimization Methods and Applications William W. Hager, Shu-Jen Huang, Panos M. Pardalos, Oleg A. Prokopyev, 2006-06-18 As optimization researchers tackle larger and larger problems scale interactions play an increasingly important role. One general strategy for dealing with a large or difficult problem is to partition it into smaller ones which are hopefully much easier to solve and then work backwards towards the solution of original problem using a solution from a previous level as a starting guess at the next level. This volume contains 22 chapters highlighting some recent research. The topics of the chapters selected for this volume are focused on the development of new solution methodologies including general multilevel solution techniques for tackling difficult large scale optimization problems that arise in science and industry. Applications presented in the book include but are not limited to the circuit placement problem in VLSI design a wireless sensor location problem optimal dosages in the treatment of cancer by radiation therapy and facility location.
