is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both
mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and
geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas
Students with less mathematical preparation than upper division mathematics majors can successfully study the topics
needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters
developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include
Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in
the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and
Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text
still manages to highlight the many connections between topics The text is self contained including appendices with the
material in Euclid s first book and a high school axiomatic system as well as Hilbert s axioms Appendices give brief
summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the
language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing
