Audiovisual Facility,1966 Principles and Practice of Geriatric Surgery Ronnie Ann Rosenthal,Michael E. Zenilman,Mark R. Katlic,2011-07-12 In the preface to this impressive and well produced book the editors state that their aim is not to describe a new surgical specialty since most surgeons will soon need to be geriatric surgeons but to assemble a comprehensive account that will allow all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients This is a useful book that deserves to do well I hope that the editors and their publisher will have the stamina to make this the first of several editions as it is clear that updated information about surgery in the elderly will be required to keep pace with this important field NEJM Book Review **The Pathological Anatomy of the Ear** Hermann Schwartz,1878 Neurological and Sensory Disease ,1963

Public Health Service Publication United States. Public Health Service,1966 **Neurological and Sensory Disease** United States. Public Health Service. Audiovisual Facility,1966 *The Reptile Ear* Ernest Glen Wever,2019-01-29 In this definitive work Ernest Glen Wever establishes the evolutionary importance of the reptile ear as the origin of the higher type of auditory apparatus shared by man and the mammals Tracing the development of the auditory receptor in the living reptiles he examines the use of a variety of mechanisms and principles of action by that receptor While some of the material in this

book has appeared previously in journal articles most of it is presented here for the first time Basing this study on his twenty years of research at Princeton s Auditory Research Laboratories Professor Wever treats in anatomical and functional detail the auditory mechanism in about 250 species and subspecies of reptiles The anatomical treatment rests on dissections and histological examinations of the ears in serial section and portrays the relevant features in drawings that represent particular views of reconstructions The author evaluates the performance of these ears electrophysiologically in terms of the electrical potentials of the cochlea paying particular attention to problems of the transmission of vibrations inward to the cochlea and the actions there in stimulating the sensory cells Professor Wever finds that the cochlea emerged independently from the non auditory labyrinth in three different vertebrate groups fishes amphibians and reptiles It was among the reptiles however that the vertebrate ear took on a more advanced configuration from which it further evolved along separate lineages in the birds and mammals Ernest Glen Wever is Eugene Higgins Professor of Psychology Emeritus at Princeton University Originally published in 1978 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
