allows problems to be solved efficiently has not yet crystallized Western Society in Transition examines the succession of societal models of the Western world and indications of its probable shape in the future Bornschier characterizes the 1985-1995 period as a decade of Third World debt and depression continued economic decline in the United States a steady ascent of Japan Western Europe's move toward political union and the collapse of the Soviet Union Against this background he sketches various elements of a theoretical perspective he calls evolutionary conflict theory The primary focus of interest of this theory is not on single societies but on measures of social transformation at the core of world society Western Society in Transition deals with fundamental questions How does social order arise and why does it dissolve What provides social cohesion What makes society progress Institutional spheres of Western society such as technology firms the market state building education power conflict and social movements are analyzed in detail Peter Lengyel editor emeritus of the International Social Science Journal says of Western Society in Transition I have never seen such a succinct clear and persuasive treatment which adroitly draws together elements from economics history sociology and technology into a strictly contemporary kind of political economy This timely assessment of the Western world will be of interest to social scientists historians economists and international relations scholars
