Algebraic Methods in Semantics M. Nivat, John C. Reynolds, 1985 This book which contains contributions from leading researchers in France USA and Great Britain gives detailed accounts of a variety of methods for describing the semantics of programming languages i e for attaching to programs mathematical objects that encompass their meaning Consideration is given to both denotational semantics where the meaning of a program is regarded as a function from inputs to outputs and operational semantics where the meaning includes the sequence of states or terms generated internally during the computation The major problems considered include equivalence relations between operational and denotational semantics rules for obtaining optimal computations especially for nondeterministic programs equivalence of programs meaning preserving transformations of programs and program proving by assertions Such problems are discussed for a variety of programming languages and formalisms and a wealth of mathematical tools is described The Logic Programming Paradigm Krzysztof R. Apt, Victor W. Marek, Mirek Truszczyński, David S. Warren, 2012-12-06 Logic Programming was founded 25 years ago This exciting new text reveals both the evolution of this programming paradigm since its inception and the impressively broad scope of current research in Logic Programming The contributions to the book deal with both theoretical and practical issues They address such diverse topics as computational molecular biology machine learning mobile computing multi agent systems planning numerical computing and dynamical systems database systems an alternative to the formulas as types approach program semantics and analysis and natural language processing The contributors are all leading world experts in Logic Programming and their contributions were all invited and refereed

Compiler Construction Peter A. Fritzson, 1994-03-23 The International Conference on Compiler Construction provides a forum for presentation and discussion of recent developments in the area of compiler construction language implementation and language design Its scope ranges from compilation methods and tools to implementation techniques for specific requirements on languages and target architectures It also includes language design and programming environment issues which are related to language translation There is an emphasis on practical and efficient techniques This volume contains the papers selected for presentation at CC 94 the fifth International Conference on Compiler Construction held in Edinburgh U K in April 1994 , Executive Function and Dysfunction Scott J. Hunter, Elizabeth P. Sparrow, 2012-10-04 Executive dysfunction occurs in many clinical conditions and has significant impact on multiple facets of life This book summarizes executive function and dysfunction for practitioners researchers and educators covering lifespan development assessment impact and interventions Drawing together clinical neurobiological and developmental viewpoints the authors summarize the latest research findings in practical and applied terms and review conceptual approaches to assessing and identifying executive function and dysfunction Several chapters are devoted to practical aspects of executive dysfunction including research based treatment strategies educational implications forensic cautions and intervention resources Executive

dysfunction in ADHD LD MR autism mood disorders epilepsy cancer and TBI is covered with test performance neuroimaging and clinical presentation for these clinical conditions The book concludes with anticipation of future work in the field This is a key reference for medical psychological and educational professionals who work with children adolescents and young adults in clinical and educational settings

High Integrity Software Victor L. Winter, Sourav Bhattacharya, 2012-12-06 The second half of the twentieth century has witnessed remarkable advances in technology The unquestioned leader in this race has been computer technology Even the most modest personal computers today have computing power that would have astounded the leading technologists a few decades earlier and what's more similar advances are predicted for many years to come Looking towards the future it has been conservatively estimated that in 2047 computers could easily be 100 000 times more powerful than they were in 1997 Moore's law Moore would lead to an increase on the order of around 10 billion Bell Because of its enormous capability computer technology is becoming pervasive across the technology spectrum Nowadays it is not surprising to discover that very common household gadgets like your toaster contain computer technology Televisions microwave ovens and even electric shavers contain software And what's more the use of computer technology has been estimated to double every two years Gibbs In order to keep up with the growing technology demands and to fully utilize the ever more powerful computing platforms software projects have become more and more ambitious This has led to software systems becoming dominant forces in system functionality Further more the ambition to realize significant portions of a system's functionality through software has extended into the high consequence realm Presently software controls many critical functions in 1 airplanes 2 electronic commerce 3 space bound systems 4 medical systems and 5 various transportation systems such as automobiles and trains
