interfaces for Web applications and attractive and exciting Web pages. The server based postback architecture combined with the comprehensive array of server controls that are provided as part of the .NET Framework allow developers to quickly build browser based interfaces for Web sites and Web applications using much the same event driven approach as in traditional executable programs developed in languages like Visual Basic, Delphi and C#. This is a completely new and different way of working from previous versions of ASP and the underlying principles and workings of server based events which occur in response to actions made by the user in the page can prove to be difficult to grasp in their entirety. However constructing ASP.NET pages especially with some of the tools that are available or under development now is very much easier and often less error prone than in classic ASP. Besides a completely server based approach to user interaction does have its downsides. In high latency scenarios or over slow network connections the need to hit the server every time the page content needs to be modified can intrude on the workings of an application or reduce the perceived responsiveness of a Web site.

Dark Energy and Human Consciousness Tom Cahalan, 2014-07-22 Nobody knows how life was first breathed into the first atom molecule or cell all biologists can do is to suggest the most reasonable possibilities by analysing the oldest DNA available. Scientists postulate that life emerged from non life via natural processes about 3.7 billion years ago. It then evolved and continues to evolve to higher levels of complexity based on mutation, natural selection and time. In other words scientists believe that life is purely a physical phenomenon. There are logical arguments based on scientific concepts suggesting that dark energy is a non physical force that influences life and is the source of reason, intelligence, compassion and love. If we acknowledge and nurture this non physical dark energy aspect of our beings it will bring balance to our minds and move us from selfishness to love, care and compassion. Is this the path to freedom from selfishness, corruption, abuse of power and greed and consequently from poverty, starvation, conflict and war? *Cinema and Popular Geopolitics* Marcus

Power, 2013-09-13 With a detailed range of approaches this new collection investigates how cinematic narratives can and have been used to portray different political threats and dangers. Including a range of chapters with a contemporary focus it studies issues such as how the geopolitical world has been constructed through film, how cinema can provide explanatory narratives in periods of cultural and political anxiety, uneasiness and uncertainty. Examining the ways in which film impacts upon popular understandings of national identity and the changing geopolitical world, the book looks at how audiences make sense of the geopolitical messages and meanings contained within a variety of films from the US productions of Hollywood to Palestinian, Mexican, British and German cinematic traditions. This thought provoking book draws on an international range of contributions to discuss and fully investigate world cinema in light of key contemporary issues. This book was previously published as a special issue of *Geopolitics*. Words in the World Gary Libben, Gonja Jarema, Juhani Järvi, Eva

surprising realization that such limits are also precisely what make communication possible Wittgenstein strives to shore up the foundation of meaning through a deeper understanding of the tension between rules and practice in the use of signs while Derrida strives to expose the tension in the nature of the sign itself This tension underscores the presence of the sign as intimately bound up with its absence As a result these two approaches feature contrasting roles for interpretation between a sign and its meaning Highlighting the differences between these approaches reveals the play of hazards and benefits for language users when faced with alternative ways of understanding and accessing the power and potential of language

Eric Morris, 2011-05-06 *Acting Imaging and the Unconscious* is the fifth in a series of books written by Eric Morris on his unique system of acting. In this book the emphasis is on imaging as an acting tool to fulfill dramatic material. The work begins with an exploration of the various uses of imaging and goes on to delineate very specific techniques and approaches on how to image when to image and why. Involved in this process are dreams and dreaming as well as subpersonalities which all serve to access and communicate with the unconscious where ninety five per cent of an actor's talent lives. Also explored is a process of programming the unconscious to liberate the images that lie at the core of an actor's experience and talent thus releasing the exciting wellsprings of creativity in the roles an actor plays. With complete examples taken from classical and contemporary plays and films this book enters territories that had never before been tread upon thus taking the art of acting into a totally new dimension.

Mnemonic Ecologies Sonja K. Pieck, 2023-08-29 An exploration of the Green Belt conservation project between the former East and West Germanies and its relationship to emergent ecosystems, trauma and memorialization. The first book length scholarly treatment of Germany's largest conservation project, the Green Belt. *Mnemonic Ecologies* by Sonja Pieck presents a new interdisciplinary approach that effective restoration and conservation of wounded land must merge ecology with memory. Since the Cold War's end in 1989 German conservationists have transformed the once militarized border between East and West Germany into an extensive protected area. Yet as forests, meadows and wetlands replace fences, minefields and guard towers, ecological recovery must reckon with the pain of the borderlands' brutal past. The lessons gained by conservationists here, Pieck argues, have profound practical and ethical implications far beyond Germany. Can conservation help heal both ecological and societal wounds? How might conservation honor difficult socioecological pasts? Deeply researched and evocatively written, this beautiful interdisciplinary investigation into the legacy of war and nature's resurgence blends environmental history, ethics, geography and politics with ecology and memory studies. Amid our rampant biodiversity crisis, *Mnemonic Ecologies* shows why conservation must include humanized landscapes in its purview, thus helping to craft a new conservation ethos that is collaborative, empathetic and more sensitive to the connections between humans and the places they inhabit.
