Doc-Humanity Maurizio Ferraris,2022-09-12 However you view the present time it is a new century a new world and also a new humanity in fact humanity is not something that was ever defined once and for all but remains an open project For several decades we have been witnessing a revolution However unlike the political and ideological revolutions that took place around the First World War this is a technological and much more radical one that does not depend on people s beliefs but rather on the tireless labour of machines The rise of automation has brought about a revelation of something that had hitherto remained hidden in the workshops of homo faber That is there are very few functions apart from consumption where a machine cannot replace a human being be these material or spiritual machines need energy but they can also do without it whereas humans die if deprived of it or one can imagine a machine producing symphonies but not enjoying them So while human beings are still needed their roles and scopes have to be reconsidered Workers may be superfluous but humans are still needed including those who until recently only recognised themselves as producers The exclusion of workers from production does not discount humans being able to produce value in the form of consumption Recognising this will enable us to conceive the Webfare a new digital system that will teach us to find new names and new forms more tolerance and room for traditional human needs Above all it will teach us how to transform the

time given to us by automation into an opportunity for progress *Supergravity* Gianguido Dall'Agata,Marco Zagermann,2021-10-25 This book is about supergravity which combines the principles of general relativity and local gauge invariance with the idea of supersymmetries between bosonic and fermionic degrees of freedom The authors give a thorough and pedagogical introduction to the subject suitable for beginning graduate or advanced undergraduate students in theoretical high energy physics or mathematical physics Interested researchers working in these or related areas are also addressed The level of the presentation assumes a working knowledge of general relativity and basic notions of differential geometry as well as some familiarity with global supersymmetry in relativistic field theories Bypassing curved superspace and other more technical approaches the book starts from the simple idea of supersymmetry as a local gauge symmetry and derives the mathematical and physical properties of supergravity in a direct and minimalistic way using a combination of explicit computations and geometrical reasoning Key topics include spinors in curved spacetime pure supergravity with and without a cosmological constant matter couplings in global and local supersymmetry phenomenological and cosmological implications extended supergravity gauged supergravity and supergravity in higher spacetime dimensions **Dynamics of Galaxies** Giuseppe Bertin,2000-06-12 Our understanding of galaxies has advanced significantly in recent years New observations from ground and space based telescopes the discovery of dark matter and powerful computer simulations have been instrumental in this This textbook provides graduate students with a complete and thorough introduction to galactic dynamics The first two parts of the book define the astrophysical problems and the methods for building sound physical models Next the observational properties and models of spiral then elliptical galaxies are examined in detail Finally a selection of exciting topics from contemporary research are introduced including the formation and evolution of galaxies cooling flows accretion disks and galaxies at high redshift Throughout the emphasis is on developing a clear understanding and good physical intuition of the processes involved Full derivations are provided for key results and helpful problems are included This textbook provides graduate students with a self contained and accessible introduction to modern galactic dynamics **ENC Focus** ,2001
