"One Rotten Apple Spoils the Whole Barrel": The Plant Hormone Ethylene, the Small Molecule and its Complexity

Domenico De Martinis,Tomotsugu Koyama,Caren Chang,2015-08-14 The gaseous molecule ethylene C₂H₄ which is small in

size and simple in structure is a plant hormone most often associated with fruit ripening yet has a diversity of effects

throughout the plant life cycle While its agricultural effects were known even in ancient Egypt the complexity of its mode of

action and the broad spectrum of its effects and potential uses in plant physiology remain important scientific challenges

today In the last few decades the biochemical pathway of ethylene production has been uncovered ethylene perception and

signaling have been molecularly dissected ethylene responsive transcription factors have been identified and numerous

effects of ethylene have been described ranging from water stress development senescence reproduction plant pathogen

interactions and of course ripening Thus ethylene is involved in plant development in biotic and abiotic stress and in

reproduction There is no stage in plant life that is not affected by ethylene modulated by a complex and fascinating molecular machinery
