Measuring Up Daniel M Koretz, 2009-06-30 *Measuring Up* demystifies educational testing from MCAS to SAT to WAIS Bringing statistical terms down to earth Koretz takes readers through the most fundamental issues that arise in educational testing and shows how they apply to some of the most controversial issues in education today from high stakes testing to special education

Measuring Up Arie L. Nettles, Michael T. Nettles, 2012-12-06 *Measuring Up* revisits vital issues of equity and assessment through the research efforts and insights of many of the nation's most prominent educators and assessment experts As its most urgent purpose the publication aims to sensitize readers to the unfairness and inappropriate uses of testing instruments which under optimal circumstances have the potential to benefit all students With America fervently espousing both national and state testing the differential performance by race and social class raises the specter of tests as barriers to life milestones such as promotion graduation and college admissions In response to such punitive testing the papers included here explore a host of models and practices that are currently being piloted both in America and abroad as educators grapple with the effects the assessment is having on minority and disadvantaged students and school systems In the process outcomes of innovative portfolio and authentic assessments are weighed against important standards and principles of validity and consequences As the various authors probe the gap between African American and White test scores they raise important questions of resources family background and educational opportunity Beyond their value of their recommendations to educators their papers help to identify causes of pupil deficiencies in ways that can be addressed by policymakers To reinforce the emphasis on equity several authors present a definitive defense of affirmative action as a critical counter measure to the lack of fairness in school quality family and social supports and educational resources

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these

Congress. House. Committee on Appropriations. Subcommittee on the Departments of Labor, Health and Human Services, Education, and Related Agencies, 2013 The Well-Being, Peer Cultures and Rights of Children Loretta E. Bass, David A. Kinney, 2011-07-19 This volume is comprised of empirical research and theoretical papers about children's well being children and youth peer cultures and the rights of children and youth These empirical studies include children's voices and experiences from four continents and a range of methodological and theoretical orientations *Trapped in Mediocrity* Katherine Baird, 2012-08-09 Our students aren't learning we're falling behind other countries and many of our college graduates are even functionally illiterate We offer our kids a weak and poorly thought out curriculum too many teachers do not make good use of classroom time and follow lesson plans that are superficial and repetitive almost all state governments define proficiency at low levels of competency and because kids with very uneven skills populate a classroom teachers spend considerable time on review before introducing new material This dismal picture is tempered by the fact that the hard work and dedication of countless teachers and administrators means that many students get an excellent education But it doesn't temper it much As a group even our top students are not as strong as are those in a large majority of other rich countries But it doesn't have to be this way Katherine Baird an economist starts by clearly spelling out how our educational system is trapped in mediocrity Yet she doesn't just expose where we are She identifies the steps to get out of the trap We need to 1 dramatically reform our education's governance structure 2 establish high expectations for all students 3 provide adequate support to meet those expectations and 4 introduce strong incentives for students to work hard in school so they do their part in meeting higher

standards Clearly it isn't as simple as it sounds but Baird carefully examines each factor that has led to the current state in education and then spells out how a combination of policies will weaken the forces that keep our schools mediocre and instead make them ones worth copying
