Algebraic Codes for Data Transmission Richard E. Blahut, 2003-02-06 The need to transmit and store massive amounts of data reliably and without error is a vital part of modern communications systems Error correcting codes play a fundamental role in minimising data corruption caused by defects such as noise interference crosstalk and packet loss This book provides an accessible introduction to the basic elements of algebraic codes and discusses their use in a variety of applications The author describes a range of important coding techniques including Reed Solomon codes BCH codes trellis codes and turbocodes Throughout the book mathematical theory is illustrated by reference to many practical examples The book was first published in 2003 and is aimed at graduate students of electrical and computer engineering and at practising engineers whose work involves communications or signal processing

, 2016-06-27 Issue 08 April May June 2016 Optimization Of Technological Processes For Machine Parts And Equipment Operating in Extreme Conditions A M Gafarov P G Suleymanov V A Gafarov The paper reviews the aspects of optimization of the technological processes for high precision machine parts and equipment operating in extreme conditions The obtained results are analyzed Ratio Of Power Indicators In The System Drilling String Drive B A Perminov V B Perminov Z H Yagubov E Z Yagubov In the mode of drilling a well transmission of rotation the drill string occur from the wellhead to the bottom hole Thus at the expense to the impact dissipative forces on the drill string in the bore hole may be stop of some part column twisting of stretched portion and stall bottom of column with accelerate of rotation after accumulating a sufficient level of

potential energy The stock of potential energy in the elastic column at the rotation of upper part the greater the more moment of resistance of stationary portion column Take place redistribution of power indicators along the length of the drill string that engender relaxation oscillations in the column to the disruption of the dynamic balance as condition of the column so and system drill string drive violates the dynamic stability of column and leads to a forced harmonic changes power of the drive of engine rig In this regard the definition of conditions for the occurrence of relaxation oscillations in the system drill string drive is a very urgent task Work is devoted to research of the power indicators of the drill string in the drilling operation and the definition of the necessary conditions for maintaining the dynamic equilibrium of the system It was shown that the accumulation of potential energy in the bottom of the column is more than the kinetic energy of the upper part always provokes relaxation oscillations in the system Makes recommendation that to enhance the dynamic stability of the work regime is necessary increase the moment of inertia of the drive of column and reduce the weight of the bottom hole of column

Fast Algorithms for Signal Processing Richard E. Blahut, 2010-06-24 Efficient signal processing algorithms are important for embedded and power limited applications since by reducing the number of computations power consumption can be reduced significantly Similarly efficient algorithms are also critical to very large scale applications such as video processing and four dimensional medical imaging This self contained guide the only one of its kind enables engineers to find the optimum fast algorithm for a specific application It presents a broad range of computationally efficient algorithms describes their structure and implementation and compares their relative strengths for given problems All the necessary background mathematics is included and theorems are rigorously proved so all the information needed to learn and apply the techniques is provided in one convenient guide With this practical reference researchers and practitioners in electrical engineering applied mathematics and computer science can reduce power dissipation for low end applications of signal processing and extend the reach of high end applications

Advances in Algebraic Geometry Codes Edgar Martinez-Moro, 2008 Advances in Algebraic Geometry Codes presents the most successful applications of algebraic geometry to the field of error correcting codes which are used in the industry when one

sends information through a noisy channel The noise in a channel is the corruption of a part of the information due to either interferences in the telecommunications or degradation of the information storing support for instance compact disc An error correcting code thus adds extra information to the message to be transmitted with the aim of recovering the sent information With contributions from renowned researchers this pioneering book will be of value to mathematicians computer scientists and engineers in information theory
