

ALGEBRA I End of Course STUDY GUIDE

Slope:

$y = mx + b$
 m is the slope
 b is the y-axis intercept

Find Slope given a table:

x	y
0	-4
2	-8
-1	0

(the change in "y" over the change in "x")

$$\frac{\Delta y}{\Delta x} = \frac{-8}{-3} = -\frac{8}{3}$$

x	y
2	4
10	16

Find the slope given two points: (2, 4), (10, 16)

$$\frac{\Delta y}{\Delta x} = \frac{12}{8} = \frac{3}{2}$$

Find Slope given a graph:

Method 1:

1. Choose any two points.
2. Create table with points.
3. Find Δy and Δx .

Method 2:

$\frac{\text{Slope}}{\text{Rise}} = \frac{\text{Run}}{\text{Run}}$

Independent:

x

Dependent:

$2x - 4$

8x

$3x^2$

Number of hours

Number of hours worked

Dependent:

$f(x)$

Range:

$y = 4$

$\sqrt{5}$

Δx

Total cost \$1

Amount of money that remained

$$\begin{aligned} 2x + 10 &= 4 \\ 2x &= -6 \\ x &= -3 \end{aligned}$$

Solve for "y"

$$3x + 4y = 24$$

$$-3x$$

$$4y = -3x + 24$$

$$\frac{4y}{4} = \frac{-3x + 24}{4}$$

$$y = -\frac{3}{4}x + 6$$

Steps:

1. Add a positive or negative "x" Opposite sign of x.
2. Cancel same pairs (lines having same coefficient).
3. Divide by the number in front of y.
4. Simplify.

Linear Functions:

Possible representations

Save \$50 each week	→ gas
Silly starting each day, eg. 1000^{th} run	→ sugar
Changed \$1.00 1000^{th} minute	→ sugar
Earns \$10, eg. 1000^{th} hour	→ sugar
Converted each day, plus \$100 a day	→ sugar + sugar
Step one then, pay half price on second shirt	→ $x + 10x$
One person 1000^{th} a minute, x = hours	→ sugar
Earns 1.00% compounded on sales	→ x, sugar

Quadratics: Parent function $y = x^2$

Line of Symmetry: y-axis (solid line)

Find x-intercepts, vertex, solutions, where $y = 0$ (x's)

at end of graph, closed

Vertex (0, 0)
 Minimum or Maximum point
 Axis: Minimum/Maximum, approach

$$\begin{aligned} x^2 + 3x + 4 &= 0 \\ 0 &= 3x + 4 \\ \text{substitute } 0 &= 3x + 4 \end{aligned}$$

Exponent Basics

$$x = x^1$$

$$x^0 = \frac{x}{x} = 1$$

$$x^2 = x$$

Add Exponents & multiply numbers

$$x^1 \cdot x^1 = x^2$$

$$3^1 \cdot 3^1 = 3 \cdot 3 = 9$$

$$2x \cdot 2x = 4x^2$$

$$x^2 \cdot x^2 = x^4 \quad (3 \cdot 4x^2)^2 = 3^2 \cdot 4^2 \cdot x^4 = 144x^4$$

$$x^2 + x^2 = 2x^2 \quad 3x^2 + 4x^2 = 7x^2$$

Subtract Exponents & divide numbers

$$\frac{x^2}{x^1} = x^{2-1} = x^1$$

$$\frac{3x^2 \cdot y^2}{3x^2 \cdot y^2} = \frac{3y^2}{3} = y^2$$

$$\frac{(-6x^2y^2)(2x^2y^2)}{-18x^2y^2} = \frac{-12x^4y^4}{-18x^2y^2} = \frac{2x^2y^2}{3}$$

Process? Researching Race in Education Adrienne D. Dixon,Gloria J. Ladson-Billings,Cecilia E. Suarez,William T. Trent,James D. Anderson,2021-01-18 The question of why we need to think about how we research race demands a conceptualization of race that captures both its social construction and its temporal evolution We need both an understanding of race and clarity about how we talk about it in our design and conduct of research and in how we interpret and apply it in our findings As a field we can use research on race and racism in education to help construct social change Our purpose with this volume is to underscore the persistence of the discriminatory actions processes and the normalization of the use of race and class conditions to justify the existing and growing disparity between the quality of life and opportunity

for middle class and more affluent Whites and that for people of color and people of color who live in poverty As editors of this volume we wonder what more we could learn and understand about the process and condition of race if we dare to ask bold questions about race and racism and commit to methods and analyses that respect the experiences and knowledges of our research participants and partners

Essays on the Determinants of Student Choices and Educational Outcomes

Justin A. Wong, 2011 This dissertation is composed of three essays Essay 1 Does School Start Too Early For Student Learning considers the connection between school start time and student performance Biological evidence indicates that adolescents internal clocks are designed to make them fall asleep and wake up at later times than adults This science has prompted widespread debate about delaying school start times in the U S a country which has some of the earliest start times worldwide The debate suffers however from a glaring absence of evidence the small number of prior studies has been too low powered statistically to test whether later start times improve achievement I fill the gap by studying achievement across a large nationally representative set of high schools that have varying start times I identify the positive effect of later clock start times as well as the independent effect of greater daylight at school start time My primary empirical method is cross sectional regression with rich controls for potentially confounding variables The findings are confirmed by regression discontinuity analysis focused on schools close to time zone boundaries I quantify the net gain in welfare from having an additional hour of sunlight before school starts by comparing the substantial lifetime earnings benefits for students against the likely the societal costs Essay 2 Student Success and Teaching Assistant Effectiveness In Large Classes considers the impact teaching assistants TAs have on student performance In universities TAs play a crucial role by providing small group instruction in lecture courses with large enrollment The multiplicity of TAs creates both positive opportunities and negative incentives On the one hand some TAs may excel at tasks such as helping struggling students at which other TAs fail If so all students may be able to learn better if they can match themselves to the TA that best suits their needs On the other hand the multiplicity of TAs means that students in the same class often receive instruction that varies in quality even though they are ultimately graded on the same standard In this paper we use data from a large lecture course in which students are conditionally randomly assigned to TAs In addition to administrative data on scores and grades we use survey data which we generated on students initial preparation their study habits and their interactions with TAs We identify the existence of variation among TAs in teaching effectiveness We also identify how TAs vary in their effectiveness with certain subpopulations of students the least and best prepared students with different backgrounds and so on Using our parameter estimates we simulate student achievement under scenarios such as random assignment to TAs elimination retraining of the least effective TAs and matching of TAs to students based on initial information to show the potential gains in student welfare from more efficient matching Essay 3 A Study of Student Majors A Historical Perspective considers whether differing financial returns across degrees are a significant factor in a student s choice of a major During the late 1990s the U S

experienced a technology boom that significantly increased the initial salary offers to engineering students and computer science students in particular. These dramatic increases in returns provide an excellent opportunity to examine not only how students respond to salary levels but also to salary trends. The existing literature has focused on the extent to which differing financial returns can affect a student's choice of undergraduate major. This paper extends the analysis to test if trends in salary levels also affect the share of students selecting into various majors using a comprehensive dataset of all post secondary institutions. I find that students select into majors that offer higher salaries and have greater wage growth. Using a flexible empirical model that allows students to respond to both changes in salary levels and growth, I find that the results hold across majors and within engineering disciplines. These results help to explain why, for instance, the percentage of students choosing to major in computer science grew more rapidly than could be explained by salary level alone.
