The Flight of the Angels Alistair Charles Rolls,2023-11-27 It is a close study of four novels by Boris Vian It aims to show how *L'automne*, *Poèmes*, *L'herbe rouge* and *L'arrache-cœur* form a unified and coherent tetralogy By establishing close links between these four texts it becomes possible to achieve a more comprehensive understanding not only of the significance of the tetralogy in exposing a complex and multi layered novelistic strategy at the heart of the *vianesque* but of the individual novels as autonomous creations An examination of the novels reveals that they are not merely joined to one another via a superficial network of textual similarities that which I refer to as intratextuality but that this intertwining is emblematic of a common method of narrative construction Each Vian novel is dependent for a thorough understanding of the text to be possible upon the multiple lines of external influence running through it The sources of this influence which I refer to as intertextuality are located in various major texts of twentieth century literature anglophone as well as francophone Thus in each instance the narrative is driven by a complicated interaction of intratextuality and intertextuality

OBSERVATION and REALITY Library of Tibetan Works & Archives,2024-12-27 Because quantum theory is not clear about which of its parts refer to things that exist and which of its parts refer to things that constitute knowledge it requires interpretation That is since the theory does not specify what exists versus what is knowledge physicists and philosophers must interpret what the theory is telling us This has led to a wide range of interpretations of the theory In this talk we briefly summarize the various classes of interpretations and discuss how each class attempts to address the quantum measurement problem Ian Durham

Philosophy of Physics Jeremy Butterfield,John Earman,2007 The ambition of this volume is twofold to provide a comprehensive overview of the field and to serve as an indispensable reference work for anyone who wants to work in it For example any philosopher who hopes to make a contribution to the topic of the classical quantum correspondence will have to begin by consulting Klaas Landsman's chapter The organization of this volume as well as the choice of topics is based on the conviction that the important problems in the philosophy of physics arise from studying the foundations of the fundamental theories of physics It follows that there is no sharp line to be drawn between philosophy of physics and physics itself Some of the best work in the philosophy of physics is being done by physicists as witnessed by the fact that several of the contributors to the volume are theoretical physicists viz Ellis Emch Harvey Landsman Rovelli t Hooft the last of whom is a Nobel laureate Key features Definitive discussions of the philosophical implications of modern
