International Handbook of Mathematical Learning Difficulties Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there s still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it s time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society Teacher in Zimbabwe, 2014

Network Optimization: An Introduction to the Network Reconstruction Approach Elias Munapo,Santosh Kumar,Philimon Nyamugure,Trust Tawanda,2025-07-03 For every problem mathematical or otherwise there is more than one approach and much depends on the ingenuity of the person concerned Consider that a person is interested in picking some fruit from a tree and is considering multiple picking options One possibility is if one can reach the fruit just snip it to retrieve it The second possibility is to alternatively apply force and detach the fruit from the tree If neither option is possible the fruit can still be detached from the tree but how A third possibility lies in the fact that just holding on to the fruit and turning it in one direction it can be picked Similarly many possibilities are seen by keen eyes while solving a mathematical problem The reconstruction approach applied in this book is like the third possibility of holding a fruit and turning it in one direction until the desired solution is obtained This book is an introduction to reconstruction concepts and their applications for solving some network optimization problems Networks are a mathematical abstraction of a given physical situation which are described by using nodes links directed or non directed and link weights defining some associated properties of that physical system Reconstruction ideas exploit the mathematical structure of a particular problem and find ways to reach the required solution It is hoped that these ideas will be explored for other mathematical structures The authors have developed many methods to find optimal solutions for these network related problems and they observed that various methods discussed in 8 chapters have a common thread of reconstruction which unites them and that aspect motivated authors to develop this book
