Pacing Guide
1st Nine Weeks Fall Semester**

I. Science Process Skills, Chapters 1-2, 1-3

Resources: Holt, Environmental Science

Activities:

1. Discuss techniques using the scientific method involving observation, classification, metric measurement, prediction and conclusion and communication.
2. Discuss taxonomy – its need and history.
3. Laboratory exercise: Metric Measurement and Scientific Classification.
4. Discuss the importance of laboratory tools and safety during the lab.

Evaluation:

1. Daily quiz on lab tools, safety and lab procedure
2. Lab grades
3. Test over scientific method, laboratory safety and the scientific method.

Time Line: 10 days

QCC Objectives:	ES 1 Uses skills in laboratory or field investigations including observations, classifications, communication, metric measurement, prediction, inference, collecting and analyzing data.
	S2 Uses traditional reference materials to explore background information regarding a scientific topic
	ES 3 Learns and uses on a regular basis standard safety practices for field investigations

II. Chemistry Review

Resources: Holt, Environmental Science; Globe, Physical science; Library Video "The Periodic Table"

Activities:

1. Discussion of atoms, molecules, elements, compounds.
2. Lab: Construct models of compounds (H₂O, NaOH, HCl)
3. Study Guide: Lessons 12/5-12/7, Physical Science.
4. Group work on the organization of the Periodic Table.
5. Library video #560, "The Periodic Table."
6. Study Guide: Lessons 14/1-14/6, Physical Science.
7. Lab: Construct models of atoms, electron configurations.
8. Lecture: Bonding and Compounds/Ionic and Covalent Bonds.
9. Study Guide: Lessons 15/1-15/6, Physical Science.
10. Discussion of Acids, Bases, and pH.

Analogies Holt Environmental Science Analogies:

Metaphors and Analogies in Sciences and Humanities Shyam Wuppuluri, A. C. Grayling, 2022-05-30 In this highly interdisciplinary volume we systematically study the role of metaphors and analogies in misshaping our understanding of the world. Metaphors and analogies occupy a prominent place in scientific discourses as they do in literature, humanities, and at the very level of our thinking itself. But when misused, they can lead us astray, blinding our understanding inexorably. How can metaphors aid us in our understanding of the world? What role do they play in our scientific discourses and in humanities? How do they help us understand and skillfully deal with our complex socio-political scenarios? Where is the dividing line between their use and abuse? Join us as we explore some of these questions in this volume.

Sethi, 2012-12-06 The study of environment in the administrative management context is of a relatively recent vintage. It owes much to the comparative emphasis upon the applications of social disciplines within the organization's framework. It derives much from the modern perspectives of a total managerial strategy unrestricted by the limited internal firm situations. Basically, environmental studies have contributed to the incorporation of an extra business and profit dimension in the managerial functions. Much has already been written about social sciences and their behavioral utility for rational administration. After several years of teaching and consulting activities focusing on this subject, I was quite convinced, however, that an Environmental Interaction approach could contribute to the effectiveness of both the practicing manager and the preaching academician in their persuasive efforts to apply environmental outlook in everyday business decisions and functions. This is the basic rationale for this book. I am grateful to a number of people who have contributed to the direct and indirect preparation of this research study. Dean John C. Unruly Complexity Peter J. Taylor, 2010-12-15 Ambitiously identifying fresh issues in the study of complex systems, Peter J. Taylor in a model of interdisciplinary exploration makes these concerns accessible to scholars in the fields of ecology, environmental science, and science studies. Unruly Complexity explores concepts used to deal with complexity in three realms: ecology and socio-environmental change, the collective constitution of knowledge, and the interpretations of science as they influence subsequent research. For each realm, Taylor shows that unruly complexity situations that lack definite boundaries, where what goes on outside continually restructures what is inside, and where diverse processes come together to produce change, should not be suppressed by partitioning complexity into well-bounded systems that can be studied or managed from an outside vantage point. Using case studies from Australia, North America, and Africa, he encourages readers to be troubled by conventional boundaries, especially between science and the interpretation of science, and to reflect more self-consciously on the conceptual and practical choices.
