Isogeometric Analysis and Applications 2018 Harald van Brummelen, Cornelis Vuik, Matthias Möller, Clemens Verhoosel, Bernd Simeon, Bert Jüttler, 2021-01-13 This proceedings volume gathers a selection of outstanding research papers presented at the third Conference on Isogeometric Analysis and Applications held in Delft The Netherlands in April 2018 This conference series previously held in Linz Austria in 2012 and Annweiler am Trifels Germany in 2014 has created an international forum for interaction between scientists and practitioners working in this rapidly developing field

Isogeometric analysis is a groundbreaking computational approach that aims to bridge the gap between numerical analysis and computational geometry modeling by integrating the finite element method and related numerical simulation techniques into the computer aided design workflow and vice versa The methodology has matured over the last decade both in terms of our theoretical understanding its mathematical foundation and the robustness and efficiency of its practical implementations This development has enabled scientists and practitioners to tackle challenging new applications at the frontiers of research in science and engineering and attracted early adopters for this his novel computer aided design and engineering technology in industry The IGAA 2018 conference brought together experts on isogeometric analysis theory and application share their insights into challenging industrial applications and to discuss the latest developments as well as the directions of future research and development that are required to make isogeometric analysis an established mainstream technology Finite Element Analysis in Geotechnical Engineering David M Potts,Lidija Zdravkovic,Lidija Zdravković,2001 An insight into the use of the finite method in geotechnical engineering The first volume covers the theory and the second volume covers the applications of the subject The work examines popular constitutive models numerical techniques and case studies *Thirty Years of Literacies Testing at the University of Cape Town* Alan Cliff,2024-05-10 This book delves into extensive research regarding the identification and characterization of academic literacies constructs encompassing academic literacy quantitative literacy mathematics comprehension and reasoning skills with a specific focus on their relevance within South African educational contexts The volume provides an in depth exploration of the research behind the design and creation of assessments aimed at gauging these crucial literacies It also delves into theoretical aspects of developmental work while shedding light on historical and contemporary inequalities in the South African educational landscape Emphasising the practical implications of this research the book underscores the pivotal role that assessing academic literacies can play in the equitable selection of students particularly those hailing from educationally disadvantaged backgrounds Additionally it highlights how such assessments can inform higher education responsiveness curriculum development programme implementation and the provision of support services for students ultimately aiding in informed student placement decisions Essential Skills Math!
