Eikenberry, 2016-06-14 Introduction to Mathematical Oncology presents biologically well motivated and mathematically
tractable models that facilitate both a deep understanding of cancer biology and better cancer treatment designs It covers
the medical and biological background of the diseases modeling issues and existing methods and their limitations The
authors introduce mathematical and programming tools along with analytical and numerical studies of the models They also
develop new mathematical tools and look to future improvements on dynamical models After introducing the general theory
of medicine and exploring how mathematics can be essential in its understanding the text describes well known practical and
insightful mathematical models of avascular tumor growth and mathematically tractable treatment models based on ordinary
differential equations It continues the topic of avascular tumor growth in the context of partial differential equation models
by incorporating the spatial structure and physiological structure such as cell size The book then focuses on the recent active
multi scale modeling efforts on prostate cancer growth and treatment dynamics It also examines more mechanistically
formulated models including cell quota based population growth models with applications to real tumors and validation using
clinical data The remainder of the text presents abundant additional historical biological and medical background materials
for advanced and specific treatment modeling efforts Extensively classroom tested in undergraduate and graduate courses
