HUMAN ANATOMY AND PHYSIOLOGY

Study of the structure and function of the human body

Anatomy

The scientific study of the structure of the human body

Physiology

The scientific study of the function of the human body

Structural levels

Also known as the levels of organization of the human body

- 1. Chemical level - study of the chemical composition of the body
- 2. Cellular level - study of the structure and function of cells
- 3. Tissue level - study of the structure and function of tissues
- 4. Organ level - study of the structure and function of organs
- 5. System level - study of the structure and function of body systems
- 6. Organism level - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body

Characteristics of living organisms

- 1. Organization - the arrangement of parts of the body
- 2. Growth - the increase in size of the body
- 3. Development - the change in the body over time
- 4. Reproduction - the production of new individuals

The body is made up of cells and tissues. Cells are the basic units of structure and function of the body. Tissues are groups of cells that work together to perform a specific function.

The body is made up of cells and tissues. Cells are the basic units of structure and function of the body. Tissues are groups of cells that work together to perform a specific function.

- 1. Cells - the basic units of structure and function of the body
- 2. Tissues - groups of cells that work together to perform a specific function
- 3. Organs - structures made up of different tissues that perform a specific function
- 4. Systems - groups of organs that work together to perform a specific function

ORGANS

- 1. Definition - an organ is a structure made up of different tissues that perform a specific function
- 2. Examples - heart, lungs, stomach, liver, kidneys, etc.
- 3. Function - organs perform specific functions in the body

Organ systems

- 1. Definition - an organ system is a group of organs that work together to perform a specific function
- 2. Examples - digestive system, respiratory system, circulatory system, etc.
- 3. Function - organ systems perform specific functions in the body

Organ systems

Organ systems perform specific functions in the body

SYSTEMS

- 1. Definition - a system is a group of organs that work together to perform a specific function
- 2. Examples - digestive system, respiratory system, circulatory system, etc.
- 3. Function - systems perform specific functions in the body

System components

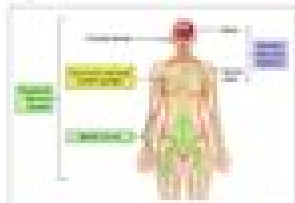

- 1. Definition - the components of a system are the organs that make up the system
- 2. Examples - the components of the digestive system are the mouth, stomach, and intestines
- 3. Function - the components of a system perform specific functions in the body

The body is made up of cells and tissues. Cells are the basic units of structure and function of the body. Tissues are groups of cells that work together to perform a specific function.

AEROSOL SYSTEM

System

- 1. Definition - a system is a group of organs that work together to perform a specific function
- 2. Examples - digestive system, respiratory system, circulatory system, etc.
- 3. Function - systems perform specific functions in the body

System

- 1. Definition - a system is a group of organs that work together to perform a specific function
- 2. Examples - digestive system, respiratory system, circulatory system, etc.
- 3. Function - systems perform specific functions in the body

System

- 1. Definition - a system is a group of organs that work together to perform a specific function
- 2. Examples - digestive system, respiratory system, circulatory system, etc.
- 3. Function - systems perform specific functions in the body
