Figure 1: Representation of particles in different states of matter

Heat conduction occurs in different materials and different states of matter. The following figure illustrates the representation of particles in different states of matter:

Heat Conduction

- Heat is the energy transferred between two objects in contact. It is the energy that is transferred from one object to another. The amount of heat transferred is proportional to the temperature difference between the two objects.

Figure 2: Representation of heat conduction in different states of matter

	SOLID	LIQUID	GAS
How does heat transfer occur?	Heat transfer in solids occurs through the vibration of particles. The particles are tightly packed and vibrate in place.	Heat transfer in liquids occurs through the vibration of particles. The particles are more loosely packed and vibrate in place.	Heat transfer in gases occurs through the vibration of particles. The particles are widely spaced and vibrate in place.
