

EXAMPLE 3

Geometric Figure Application
 The graph shows the water level in a reservoir at different times. Find the slope of the line segment.

Step 1 Find the slope formula.

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$= \frac{1000 - 0}{20 - 0}$$

$$= \frac{1000}{20}$$

$$= 50$$

Step 2 Find the slope formula.

The reservoir is a geometric figure. The water level is represented by the y-axis. The time is represented by the x-axis. The slope of the line segment is 50. This means that for every 1 unit of time, the water level increases by 50 units.

Now Work PROBLEM 35

For more examples that describe a line, you can look at the graph and the equation of the line. The graph shows the line passing through the points (0, 0) and (10, 10). The equation of the line is $y = x$.

EXAMPLE 4

Finding Slope from an Equation

Find the slope of the line described by $4x - 3y = 36$.

Step 1 Write the equation in slope-intercept form.

$$4x - 3y = 36$$

$$-3y = -4x + 36$$

$$y = \frac{4}{3}x - 12$$

Step 2 Find the y-intercept.

$$4x - 3y = 36$$

$$4(0) - 3y = 36$$

$$-3y = 36$$

$$y = -12$$

Step 3 The line passes through (0, -12) and (9, 0). Use the slope formula.

$$m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{0 - (-12)}{9 - 0} = \frac{12}{9} = \frac{4}{3}$$

Now Work PROBLEM 36

THINK AND DISCUSS

- The slope of a line is the difference of the y -coordinates divided by the difference of the x -coordinates. For any two points on the line.
- Two points on a line define a unique line. Therefore, if you know the slope formula, the value of the slope is unique. Does this make sense?
- GET ORGANIZED** Copy and complete the graphic organizer. In each box, describe how to find the slope using the given method.

Graphing

Graph the line.

GUIDED PRACTICE

Find the slope of the line that contains each pair of points.

- (1, 3) and (2, 5)
- (-2, 7) and (3, 1)
- (-1, -1) and (2, -4)

Each graph below shows a linear relationship. Find the slope.

How Students Think When Doing Algebra

Steve Rhine,Rachel Harrington,Colin Starr,2018-11-01 Algebra is the gateway to college and careers yet it functions as the eye of the needle because of low pass rates for the middle school high school course and students struggles to understand We have forty years of research that discusses the ways students think and their cognitive challenges as they engage with algebra This book is a response to the National Council of Teachers of Mathematics NCTM call to better link research and practice by capturing what we have learned about students algebraic thinking in a way that is usable by teachers as they prepare lessons or reflect on their experiences in the classroom Through a Fund for the Improvement of Post Secondary Education FIPSE grant 17 teachers and mathematics educators read through the past 40 years of research on students algebraic thinking to capture what might be useful information for teachers to know over 1000 articles altogether The resulting five domains addressed in the book Variables Peterson Leatham 2009 The purpose of this book is to accelerate early career teachers experience with how students think when doing algebra in middle or high school as well as to supplement veteran teachers knowledge of content and students The research that this book is based upon can provide teachers with insight into the nature of a student s struggles with particular algebraic ideas to help teachers identify patterns that imply underlying thinking Our book How Students Think When Doing Algebra is not intended to be a how to book for teachers Instead it is intended to orient new teachers to the ways students think and be a book that teachers at all points in their career continually pull of the shelf when they wonder how might my students struggle with this algebraic concept I am about to teach The primary audience for this book is early career mathematics teachers who don t have extensive experience working with students engaged in mathematics However the book can also be useful to veteran teachers to supplement their knowledge and is an ideal resource for mathematics educators who are preparing preservice teachers

Glenn Beck,2014-05-06 Glenn Beck the New York Times bestselling author of The Great Reset considers the hot button issue of education in the US exposing the weaknesses of the Common Core school curriculum and examining why liberal solutions fail Public education is never mentioned in the constitution Why Because our founders knew that it was an issue for state and local governments not the federal one It s not a coincidence that the more the federal government has inserted itself into public education over the years the worse our kids have fared Washington dangles millions of dollars in front of states and then tells them what they have to do to get it It s backdoor nationalization of education and it s leading us to ruin In Conform Glenn Beck presents a well reasoned fact based analysis that proves it s not more money our schools need it s a complete

refocusing of their priorities and a total restructuring of their relationship with the federal government In the process he dismantles many of the common myths and talking points that are often heard by those who want to protect the status quo Critics of the current system are just teacher bashers Teachers unions put kids first Homeschooled kids suffer both academically and socially local control is an excuse to protect mediocrity Common Core is rigorous and state led Critics of Common Core are just conspiracy theorists Elementary school teachers need tenure We can't reform schools until we eradicate poverty school choice takes money away from public schools Charter schools perform poorly relative to public schools There is no issue more important to America's future than education The fact that we've yielded control over it to powerful unions and ideologically driven elitists is inexcusable We are failing ourselves our children and our country Conform gives parents the facts they need to take back the debate and help usher in a new era of education built around the commonsense principles of choice freedom and accountability

Uncomplicating Algebra to Meet Common Core Standards in Math, K-8 Marian Small, 2014-12-04 In the second book in the Uncomplicating Mathematics Series professional developer Marian Small shows teachers how to uncomplicate the teaching of algebra by focusing on the most important ideas that students need to grasp Organized by grade level around the Common Core State Standards for Mathematics Small shares approaches that will lead to a deeper and richer understanding of algebra for both teachers and students The book opens with a clear discussion of algebraic thinking and current requirements for algebraic understanding within standards based learning environments The book then launches with Kindergarten where the first relevant standard is found in the operations and algebraic thinking domain and ends with Grade 8 where the focus is on working with linear equations and functions In each section the relevant standard is presented followed by a discussion of important underlying ideas associated with that standard as well as thoughtful concept based questions that can be used for classroom instruction practice or assessment Underlying ideas include Background to the mathematics of each relevant standard Suggestions for appropriate representations for specific mathematical ideas Suggestions for explaining ideas to students Cautions about misconceptions or situations to avoid The Common Core State Standards for Mathematics challenges students to become mathematical thinkers not just mathematical doers This resource will be invaluable for pre and inservice teachers as they prepare themselves to understand and teach algebra with a deep level of understanding Uncomplicating Algebra is an excellent resource for teachers responsible for the mathematical education of K-8 students It is also a valuable tool for the training of preservice teachers of elementary and middle school mathematics Carole Greenes associate vice provost for STEM education director of the Practice Research and Innovation in Mathematics Education PRIME Center professor of mathematics education Arizona State University The current climate in North America places a major emphasis on standards including the Common Core State Standards for Mathematics in the U.S In many cases teachers are being asked to teach content with which they themselves struggle In this book Dr Small masterfully breaks down the big ideas of algebraic thinking to assist

teachers math coaches and preservice teachers helping them to deepen their own understanding of the mathematics they teach She describes common error patterns and examines algebraic reasoning from a developmental viewpoint connecting the dots from kindergarten through grade 8 The book is clearly written loaded with specific examples and very timely I recommend it strongly as a must read for all who are seeking to broaden their understanding of algebra and how to effectively teach this important content area to children Daniel J Brahier director Science and Math Education in ACTION professor of mathematics education School of Teaching and Learning Bowling Green State University **Differentiating Math Instruction, K-8** William N.
