

ALGEBRA

Equations, formulae, expressions and identities

Pupils should learn to:

Use letter symbols and distinguish their different roles in algebra

As outcomes, Year 7 pupils should, for example:

Use, read and write, spelling correctly:
algebra, unknown, symbol, variable... equals... brackets...
evaluate, simplify, substitute, solve...
term, expression, equation... squared... commutative...

Reinforce the idea of an **unknown**. Answer questions such as:

- $5 + \square = 17$
- $3 \times \square - 5 = 7$
- $\blacktriangledown + \blacklozenge = 4$. What numbers could $\blacktriangledown$ and $\blacklozenge$ be?
- The product of two numbers is 24. What could they be?

Know that letters are used to stand for numbers in algebra. Begin to distinguish between different uses of letters.

For example:

- In the equation $3n + 2 = 11$, n is a particular unknown number, but in the equation $a + b = 12$, a and b can take many different values.

Recognise algebraic conventions, such as:

- $3 \times n$ or $n \times 3$ can be thought of as '3 lots of n '; or $n + n + n$, and can be shortened to $3n$.
- In the expression $3n$, n can take any value, but when the value of an expression is known, an equation is formed, i.e. if $3n$ is 18, the equation is written as $3n = 18$.

Understand the meaning of and begin to use simple expressions with brackets, e.g. $3(n + 2)$ meaning $3 \times (n + 2)$, where the addition operation is to be performed first and the result of this is then multiplied by 3.

Use the equals sign appropriately and correctly.

- Recognise that if $a = b$ then $b = a$, and that $a + b = c$ can also be written as $c = a + b$.
- Avoid errors arising from misuse of the sign when setting out the steps in a calculation, e.g. incorrectly writing:
 $38 + 29 = 38 + 30 = 68 - 1 = 67$

Use letter symbols to write expressions in meaningful contexts.

For example:

add 7 to a number	$n + 7$
subtract 4 from a number	$n - 4$
4 minus a number	$4 - n$
a number multiplied by 2 and then 5 added	$(n \times 2) + 5$ or $2n + 5$
a number divided by 2	$n \div 2$ or $n/2$
a number plus 7 and then multiplied by 10	$(n + 7) \times 10$ or $10(n + 7)$
a number multiplied by itself	$n \times n$ or n^2

Understand the difference between expressions such as:

$2n$ and $n + 2$	$3(c + 5)$ and $3c + 5$
n^2 and $2n$	$2n^2$ and $(2n)^2$

Proceedings of the Fourth International Congress on Mathematical Education M.

Zweng,Green,Kilpatrick,Pollack,Suydam,2012-12-06 Henry O Pollak Chairman of the International Program Committee Bell Laboratories Murray Hill New Jersey USA The Fourth International Congress on Mathematics Education was held in Berkeley California USA August 10 16 1980 Previous Congresses were held in Lyons in 1969 Exeter in 1972 and Karlsruhe in 1976 Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries at least half of these come from outside of North America About 450 persons participated in the program either as speakers or as presiders approximately 40 percent of these came from the U S or Canada There were four plenary addresses they were delivered by Hans Freudenthal on major problems of mathematics education Hermina Sinclair on the relationship between the learning of

language and of mathematics Seymour Papert on the computer as carrier of mathematical culture and Hua Loo Keng on popularising and applying mathematical methods Gerge Polya was the honorary president of the Congress illness prevented his planned attendance but he sent a brief presentation entitled Mathematics Improves the Mind There was a full program of speakers panelists debates miniconferences and meetings of working and study groups In addition 18 major projects from around the world were invited to make presentations and various groups representing special areas of concern had the opportunity to meet and to plan their future activities History of Mathematics Craig Smorynski,2007-12-03 1 An Initial Assignment I haven't taught the history of mathematics that often but I do rather like the course The chief drawbacks to teaching it are that i it is a lot more work than teaching a regular mathematics course and ii in American colleges at least the students taking the course are not mathematics majors but education majors and in the past I had found education majors to be somewhat weak and unmotivated The last time I taught the course however the majority of the students were graduate education students working toward their master's degrees I decided to challenge them right from the start 1 Assignment In An Outline of Set Theory James Henle wrote about mathematics Every now and then it must pause to organize and reflect on what it is and where it comes from This happened in the sixth century B C when Euclid thought he had derived most of the mathematical results known at the time from five postulates Do a little research to find as many errors as possible in the second sentence and write a short essay on them The responses far exceeded my expectations To be sure some of the undergraduates found the assignment unclear I did not say how many errors they were supposed to find But many of the students put their hearts and souls 1 My apology to Prof Henle at whose expense I previously had a little fun on this matter I used it again not because of any animosity I hold for him but because I was familiar with it and dealing with Euclid it seemed appropriate for the start of my course A History of the Study of Mathematics at Cambridge Walter William Rouse Ball,1889 *Faculty White Pages, 1991* CMG Information Services,1991-03
