Industrial Electrochemistry and Electrochemical Engineering (General) - 220th ECS Meeting J. Weidner,2012
American Laboratory ,2008 *Current Advances in Anaerobic Digestion Technology* Marcell Nikolausz,2021-03-17
 Anaerobic digestion AD is one of the oldest biotechnological processes and originally referred to biomass degradation under

anoxic conditions in both natural and engineered systems It has been used for decades to treat various waste streams and to produce methane rich biogas as an important energy carrier and it has become a major player in electrical power production AD is a popular mature technology and our knowledge about the influencing process parameters as well as about the diverse microbial communities involved in the process has increased dramatically over the last few decades To avoid competition with food and feed production the AD feedstock spectrum has constantly been extended to waste products either rich in recalcitrant lignocellulose or containing inhibitory substances such as ammonia which requires application of various pre treatments or specific management of the microbial resources Extending the definition of AD it can also convert gases rich in hydrogen and carbon dioxide into methane that can substitute natural gas which opens new opportunities by a direct link to traditional petrochemistry Furthermore AD can be coupled with emerging biotechnological applications such as microbial electrochemical technologies or the production of medium chain fatty acids by anaerobic fermentation Ultimately because of the wide range of applications AD is still a very vital field in science This Special Issue highlights some key topics of this research field

Trends in Catalytic Wet Peroxide Oxidation Processes Asuncion Quintanilla,Macarena Munoz,2020-01-07 This book gives an overview of the state of the art in Catalytic Wet Peroxide Oxidation research for the treatment of industrial and urban wastewaters and provides novel solutions to overcome the current challenges of this technology These solutions include tailoring of the catalysts to exploit the use of additional energy sources and oxidants The collected papers illustrate the high versatility of this low cost technology easily adaptable to any kind of wastewater either polluted by high loaded recalcitrant organics in industrial wastewaters or by emerging pollutants at microconcentration levels in urban waters
