musculoskeletal diseases especially in the increasing population of elderly people Human movement is generated through a complex web of interactions between embedded physiological systems on different spatiotemporal scales ranging from the molecular to the organ level Much research is dedicated to the understanding of each of these systems using methods and modalities tailored for each scale Nevertheless combining knowledge from different perspectives opens new venues of scientific thinking and stimulates innovation Integration of this mosaic of multifaceted data across multiple scales and modalities requires further exploration of methods in simulations and visualization to obtain a comprehensive synthesis However this integrative approach cannot be achieved without a broad appreciation for the multiple research disciplines **Electromagnetic Fields in Biological Systems** James C.
