

Lesson 3.1 -- Using and Interpreting Function Notation

Graphs:

Can represent an equation, but not a function. The graph of a function must pass the vertical line test.

Defining a function verbally:

Each input has exactly one output.

Ex: The function that maps each person to their age.

Graphing function notation:

Use $f(x)$ to represent the output of the function f when the input is x .

Check Your Understanding

1. A graph of $y = f(x)$ is shown below.

a. What is $f(2)$? **2**

b. What is $f(4)$? **3**

c. What is a function value of f ?

$x > 0$ then $f(x) > 0$

2. Use this graph to answer the question. The number of people in the area 1000 feet from a house after the house is open. Interpret each of the following statements in context.

a. $f(1000) = 10$

When the house is open, 10 people are 1000 feet away.

b. $f(1000) = 1000$

The number of people is 1000 when the house is open. 1000 is the input.

3. Scientists have discovered that there is a pattern, or rule, that can determine the heading distance a car travels in the air to a speed when the car's speed, s , and then double the speed, $2s$.

a. Use this rule to predict the heading distance of a car traveling through.

200 ft, 9 km

b. Write an equation for $f(s)$ that represents the car's heading distance when driving at a speed of s miles per hour.

$f(s) = \frac{s^2}{10}$

c. $f(1000) = 1000$

When the house is open, 1000 people are 1000 feet away.

d. $f(1000) = 10$

When the house is open, 10 people are 1000 feet away.
