A Methodology for the Cryptanalysis of Classical Ciphers with Search Metaheuristics George Lasry, 2018 Cryptography the art and science of creating secret codes and cryptanalysis the art and science of breaking secret codes underwent a similar and parallel course during history Both fields evolved from manual encryption methods and manual codebreaking techniques to cipher machines and codebreaking machines in the first half of the 20th century and finally to computerbased encryption and cryptanalysis from the second half of the 20th century However despite the advent of modern computing technology some of the more challenging classical cipher systems and machines have not yet been successfully cryptanalyzed For others cryptanalytic methods exist but only for special and advantageous cases such as when large amounts of ciphertext are available Starting from the 1990s local search metaheuristics such as hill climbing genetic algorithms and simulated annealing have been employed and in some cases successfully for the cryptanalysis of several classical ciphers In most cases however results were mixed and the application of such methods rather limited in their scope and performance In this work a robust framework and methodology for the cryptanalysis of classical ciphers using local search metaheuristics mainly hill climbing and simulated annealing is described In an extensive set of case studies conducted

as part of this research this new methodology has been validated and demonstrated as highly effective for the cryptanalysis of several challenging cipher systems and machines which could not be effectively cryptanalyzed before and with drastic improvements compared to previously published methods This work also led to the decipherment of original encrypted messages from WWI and to the solution for the first time of several public cryptographic challenges [A World Transformed](#) James Walvin,2022-05-17 A comprehensive study of how slavery and enslaved people shaped the modern world A World Transformed explores how slavery thrived at the heart of the entire Western world for more than three centuries Arguing that slavery can be fully understood only by stepping back from traditional national histories this book collects the scattered accounts of the latest modern scholarship into a comprehensive history of slavery and its shaping of the world we know Celebrated historian James Walvin tells a global story that covers everything from the capitalist economy labor and the environment to social culture and ideas of family beauty and taste This book underscores just how thoroughly slavery is responsible for the making of the modern world The enforced transportation and labor of millions of Africans became a massive social and economic force catalyzing the rapid development of multiple new and enormous trading systems with profound global consequences The labor and products of enslaved people changed the consumption habits of millions in India and Asia Europe and Africa in colonized and Indigenous American societies Across time slavery shaped many of the dominant features of Western taste items and habits or rare and costly luxuries some of which might seem at first glance utterly removed from the horrific reality of slavery A World Transformed traces the global impacts of slavery over centuries far beyond legal or historical endpoints confirming that the world created by slave labor lives on today **Google Hacking for Penetration Testers** Bill Gardner,Johnny Long,Justin Brown,2011-04-18 This book helps people find sensitive information on the Web Google is one of the 5 most popular sites on the internet with more than 380 million unique users per month Nielsen NetRatings 8 05 But Google s search capabilities are so powerful they sometimes discover content that no one ever intended to be publicly available on the Web including social security numbers credit card numbers trade secrets and federally classified documents Google Hacking for Penetration Testers Volume 2 shows the art of manipulating Google used by security professionals and system administrators to find this sensitive information and self police their own organizations Readers will learn how Google Maps and Google Earth provide pinpoint military accuracy see how bad guys can manipulate Google to create super worms and see how they can mash up Google with MySpace LinkedIn and more for passive reconnaissance Learn Google Searching BasicsExplore Google s Web based Interface build Google queries and work with Google URLs Use Advanced Operators to Perform Advanced QueriesCombine advanced operators and learn about colliding operators and bad search fu Learn the Ways of the Google HackerSee how to use caches for anonymity and review directory listings and traversal techniques Review Document Grinding and Database DiggingSee the ways to use Google to locate documents and then search within the documents to locate information Understand Google s Part in an Information
