

FRONT DIFFERENTIAL

GENERAL

The procedure explained below is the same for the NH and LH silver-oxide electrodes fabricated.

SYSTEM DESCRIPTION

The Visc-Lok® system constantly monitors front wheel speed and, if it detects one wheel spinning faster than its mate, it progressively sends more power to the wheel with the better traction.

The Micro-Lux system is comprised of two principal components, a shear pump and the controlled multi plate clutch.

A unique feature of the shear pump is that it is self-contained and independent; it does not require an external source of hydraulic fluid. The self-contained vaneless shear pump generates a pressure proportional to wheel speed differential - meaning the difference in rotational speed between the two wheels. This pressure engages the friction clutch via a piston to transmit the torque.

In the event of a failure, the Viscotec connecting cable and control cable will have to be replaced.

NOTE: The Vacu-Lok shear pump is not serviceable. If the pump is disassembled, the vacuum fluid contained inside will be lost and it cannot be replaced.

PROCEDURES

WHEEL HUB

William H. Raymond

W. G. and W. G. W. G.

Select the 4942 position and place the transmission lever in "P".

Remove cap(s) from inside. Refer to 20-4233 subsection.
