

Chrysler Sebring 2001-2010 Workshop Manual

JB

ENGINE 2.0L DOHC 9

LUBRICATION

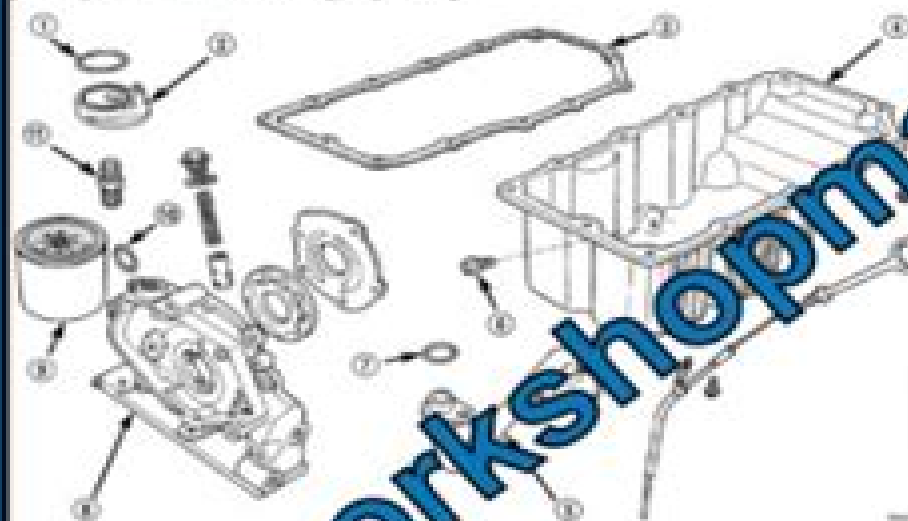

DESCRIPTION

The lubrication system is a full-flow, pressure-feed type. The oil pump (Fig. 40) is mounted in the front engine cover and driven by the crankshaft.

OPERATION

Refer to (Fig. 40) for lubrication system flow. Engine oil draws from the oil pan sump through the pickup tube is pressurized by the pump and forced through the full-flow filter to the main oil gallery running the length of the cylinder block. A dipper hole in each half-bellows feeds oil to each main bearing. Drilled passages within the crankshaft main oil from main bearing journals to connecting rod journals. A vertical hole at the number five half-bellows routes pressurized oil through a metering and up past a cylinder head hole to an oil gallery running

the length of the cylinder head. The metering, integral part of the cylinder head gasket, prevents increased oil flow to the main oil gallery. The oil shaft journals are partially slotted to allow a pre-tensioned amount of pressurized oil to pass into the bearing cap cavity with small holes directed away lubricate the crankshaft lobes. Oil entering the gas from pressurized components supplies lubrication to the valve stems. Cylinder bores and rod pins are splash lubricated from directed slots on the connecting rod skirt and valves.
