Biomass and Bioenergy Solutions for Climate Change Mitigation and Sustainability

Rathoure, Ashok Kumar, Khade, Shankar Mukundrao, 2022-10-07. The depletion of fossil fuels is a major issue in energy generation; hence biomass and renewable energy sources, especially bioenergy, are the solution. The dependence on bioenergy has many benefits to mitigate environmental pollution. It is imperative that the global society adopts these alternative sustainable energy sources in order to mitigate the constant growth of climate change. *Biomass and Bioenergy Solutions for Climate Change Mitigation and Sustainability* highlights the challenges of energy conservation and current scenarios of existing fossil fuel uses along with pollution potential of burning fossil fuel. It further promotes the inventory assessment and use of biomass pollution control and techniques. This book provides the solution for climate change mitigation and sustainability. Covering topics such as biofuel policies, economic considerations, and microalgae biofuels, this premier reference source is an essential resource for environmental scientists, environmental engineers, government officials, business leaders, politicians, librarians, students, and faculty of higher education, researchers, and academicians.

Training Engineering Students for Modern Technological Advancement Alves, Anabela Carvalho, van Hattum-Janssen, Natascha, 2021-12-17. Engineering education leads the preparation of the next generation of engineers. This is a difficult task as engineering practices rapidly evolve, pressured by the technological advancements promoted by these same engineers. Engineering schools are integrated into large and rigid higher education institutions (HEI) that are not known for their agility. Nevertheless, engineering educators must have the agility to go beyond HEI boundaries to close the gap between professional practice needs and engineering education. *Training Engineering Students for Modern Technological Advancement* examines the role of engineering teachers in preparing the next generation of engineers and presents perspectives on active learning methods for engineering education. As such, it contributes to bypassing the compartmentalized way of course organization typical in many HEIs and prepares for more agile engineering education. Covering topics such as game-based teaching methods, Industry 4.0, and management skills, this book is a dynamic resource ideal for engineers, engineering professors, engineering students, general educators, engineering professionals, academicians, and researchers.
