Sustainable Management of Wastes Through Co-processing Sadhan Kumar Ghosh,Ulhas V. Parlikar,Kåre Helge Karstensen,2021-11-16 This book is the first comprehensive book in the world on co processing of wastes as Alternative Fuels and Raw materials AFRs in cement kilns It discusses how AFR from wastes can play an important role in contributing toward reducing the use of fossil fuel and costs while conserving natural resources lowering global CO2 emissions and reducing the need for landfills The use of AFR in resource and energy intensive industries is called co processing which is discussed in detail highlighting both advantages and disadvantages Co processing in cement kilns is a technology that is practiced globally on a large scale for environmentally sound and ecologically sustaining management of wastes from agricultural industrial and municipal sources Considerable amount of scientific and technological advancements has been put in place while developing and implementing this technology at the cement plant operational scales This technology is in practice for about 40 years or so and has been recommended by Basel Convention for the sustainable management of hazardous wastes and by the Stockholm Convention for the sustainable management of POPs This technology has now been included in the waste management rules notified by the Ministry of the Government of India

and has been provided as a preferred option for the management of wastes over the conventional options of incineration and landfill. The book addresses how co processing promotes mitigation of the climate change impacts and also conservation of the natural capital in addition to building a circular economy on a large scale. Even though this technology has received required attention and inclusion in the policy framework of many governments, its understanding and awareness with the stakeholders belonging to the academic and other relevant sections are vastly missing. The book will enhance the knowledge of co processing technology among stakeholders involved in the implementation of the policy framework design and engineering of the waste processing facilities to suit the co processing operation, their operation and management, environmental consideration in implementing co processing operation and management of the cement plant quality control etc. In addition, the book will be useful for students and researchers working in this domain. **Financial Advice and**
