**Agronomic Crops** Mirza Hasanuzzaman,2019-11-23 Agronomic crops have provided food beverages fodder fuel medicine and industrial raw materials since the beginning of human civilization More recently agronomic crops have been cultivated using scientific rather than traditional methods However in the current era of climate change agronomic crops are suffering from different environmental stresses that result in substantial yield loss To meet the food demands of the ever increasing global population new technologies and management practices are being adopted to boost yields and maintain productivity under both normal and adverse conditions Further in the context of sustainable agronomic crop production scientists are adopting new approaches such as varietal development soil management nutrient and water management and pest management Researchers have also made remarkable advances in developing stress tolerance in crops However the search for appropriate solutions for optimal production to meet the increasing food demand is still ongoing Although there are several publications on the recent advances in these areas there are few comprehensive resources available covering all of the recent topics This timely book examines all aspects of production technologies management practices and stress tolerance of agronomic crops

**Seed Dormancy and Germination** Jose Carlos Jimenez-Lopez,2020-01-08 Seed dormancy and germination are critical processes for the development of plants Seed dormancy allows seeds to overcome harsh periods of seedling establishment and is also important for plant agriculture and crop yield Several processes are involved in the induction of dormancy and in the shift from the dormant to the germinating state and hormones and regulatory genetic networks are among the critical factors driving these complex processes

Germination can be prevented by different factors leading to seed dormancy which is highly dependent on environmental cues. During and after germination, early seedling growth is sustained by catabolism of stored reserves: proteins, lipids, or starch accumulated during seed maturation, supporting cell morphogenesis, chloroplast development, and root growth until photoautotrophic growth can be resumed.

#### **Fundamentals of Weed Science** Robert L Zimdahl, Nicholas T.

Basinger, 2024-02-14 *Fundamentals of Weed Science* Sixth Edition places weed management in the context of weed research and science, presenting the latest advances in the role, control, and potential uses of weed plants. #### **Biostimulants in Plant Protection and Performance**

Azamal Husen, 2024-03-16 *Biostimulants* a diverse class of compounds including substances or microorganisms are helpful in sustainable plants growth and development. They accelerate plant growth, yield, and chemical composition even under unfavorable conditions. The main biostimulants are nitrogen-containing compounds, humic materials, some specific compounds released by microbes, plants, and animals, various seaweed extracts, bio-based nanomaterials, phosphite, silicon, and so on. Additionally, new generation products and bioproducts are being developed for sustainable plant growth and protection. Some research works in the area of biotechnology and nanobiotechnology have shown improved sustainable plant growth and production. The protective roles of biostimulants are varied, depends on the compound and plant species. Exposure of biostimulants have shown accelerated plants growth and developmental processes, for instance, manage stomatal conductance and rate of transpiration and increase rate of photosynthesis etc. They also increased crop plants immune systems against the adverse situation. Thus, use of innovations of new generation biostimulants also enhance plant production systems through a significant reduction of synthetic chemicals such as pesticides and fertilizers. Moreover, bioinoculants commercial products obtained from seaweed extract, humic acids, amino acids, fulvic acids, and some microbial inoculants have shown their potential role in adventitious root induction in plants. Microbial inoculants or microbial based biostimulants as a promising and eco-friendly technology can be widely used to address environmental concerns and fulfill the need for developing sustainable or modern agriculture practices. They have great potential to elicit plant tolerance to various climate change related stresses and thus enhance plant growth and overall performance related features. However, for successful implementation, biostimulants based agriculture in the field under changing climate conditions, an understanding of plant

functions and biostimulants interaction or action mechanisms coping with various abiotic as well as biotic stresses at the physicochemical metabolic and molecular levels is required Mycorrhizae are beneficial fungi that form symbiotic associations with plants and aid in plant development disease resistance and soil health is well established Similarly phyllospheric microbiome are known to possess different plant growth promotion attributes like nitrogen fixation phosphate solubilization biocontrol activity and increase plant resistance towards abiotic stresses The plant growth promotion traits possessed by these phyllospheric microbiota can be judiciously harbored for phyllospheric and rhizospheric engineering The engineered phyllospheric and rhizospheric microbiome can increase the plant growth and productivity thereby can act as a driving force for increasing the agricultural production in a sustainable manner Taken together this book aims to contribute to the recent understanding associated with the various role and application of biostimulants on different plant for their sustainable growth and management Discusses our current understanding of and advances in biostimulants along with their application in plants growth performance and overall management Explores new techniques new generation products and bioproducts Highlights the role of seaweed extract humic acids protein hydrolysates amino acids melatonin paramylon fulvic acids microbial inoculants phyllospheric and rhizospheric and more      Recent Advances in Weed Management Bhagirath S.
