

The Digestive System

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

Liver, pancreas & gallbladder

After leaving the stomach, chyme moves into the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver**. The liver is a large organ in the upper right of the abdomen. It produces bile, which is stored in the **gallbladder**. The pancreas is a small, elongated organ located behind the stomach. It produces pancreatic juice, which is secreted into the small intestine.

Layers of large intestine

Large intestine

The large intestine consists of the cecum, the appendix, the ascending colon, the transverse colon, the descending colon, the sigmoid colon, and the rectum. It is responsible for absorbing water and electrolytes from the remaining indigestible food matter, thereby forming feces.

Peristaltic action

Food material is pushed through the digestive system by a series of powerful, rhythmic contractions called peristalsis. These contractions move the food forward and mix it with digestive juices.

The mouth & salivary glands

Chewing, the mechanical action of the food, begins in the mouth. The tongue mixes the food with the secretions of the salivary glands, which moisten and soften the food. Saliva also contains the enzyme amylase, which begins the chemical digestion of carbohydrates.

The stomach

The stomach is a large, muscular organ that is responsible for the chemical digestion of food. It is located in the upper left of the abdomen. The stomach wall is composed of several layers, including the mucosa, submucosa, muscularis, and serosa.

Small intestine

The small intestine is a long, coiled organ that is responsible for the chemical digestion of food. It is located in the central part of the abdomen. The small intestine is divided into three parts: the duodenum, the jejunum, and the ileum.

Absorption

The small intestine is responsible for the absorption of most nutrients from the food. The villi, which are small finger-like projections on the inner surface of the small intestine, increase the surface area for absorption.
