TOPIC: Causes, effects, mitigation of air pollution: write an in-depth analysis outlining major pollutants their sources and control measures

CAUSES OF AIR POLLUTION:

Air pollution is a significant environmental issue with multiple causes, often resulting from human activities and natural processes. The major causes of air pollution include:

- **Combustion of Fossil Fuels:-** Burning of coal, oil, and natural gas for energy production releases pollutants such as sulfur dioxide (SO₂), nitrogen oxides (NO_x), carbon monoxide (CO), and particulate matter into the air. Power plants, industrial facilities, and vehicles contribute to this form of pollution.
- **Vehicle Emissions:-** Combustion engines in cars, trucks, and other vehicles emit pollutants, including nitrogen oxides, carbon monoxide, hydrocarbons, and particulate matter. Traffic congestion and outdated vehicle technologies can exacerbate these emissions.
- **Industrial Activities :-** Industrial processes, including manufacturing, chemical production, and refining, release a variety of pollutants into the air. These may include particulate matter, volatile organic compounds (VOCs), heavy metals, and other hazardous substances.
- **Agricultural Practices:-** Agricultural activities contribute to air pollution through the release of ammonia from fertilizers and manure, as well as the use of pesticides and herbicides. Livestock farming is a significant source of methane, a potent greenhouse gas.
- **Deforestation and Land Use Changes:-** Deforestation and changes in land use contribute to air pollution by reducing the number of trees that can absorb pollutants. Forest fires, often a consequence of land use changes, release large amounts of particulate matter and greenhouse gases.
- **Waste Management:-** Improper waste disposal and open burning of waste release pollutants into the air. Burning of plastic, rubber, and other materials can produce toxic fumes and particulate matter.
- **Construction Activities :-** Construction sites generate dust and particulate matter, contributing to local air pollution. Demolition activities and the use of heavy machinery further release pollutants into the air.
- **Natural Sources :-** While human activities are significant contributors, natural sources such as wildfires, volcanic eruptions, and dust storms can release large amounts of pollutants into the atmosphere.
