AUSTRALIAN INFLUENZA SURVEILLANCE REPORT

The Department of Health acknowledges the providers of the many sources of data used in this report and greatly appreciates their contribution.

Data Considerations for the Australian Influenza Surveillance Report, 2018

The information in this report is reliant on the surveillance sources available to the Department of Health. As access to sources vary throughout the season, this report will draw on available information.

This report aims to increase awareness of influenza activity in Australia by providing an analysis of the various surveillance data sources throughout Australia. While every care has been taken in preparing this report, the Commonwealth does not accept liability for any injury or loss or damage arising from the use of, or reliance upon, the content of the report. Delays in the reporting of data may cause data to change retrospectively. For further details about information contained in this report please contact the [Influenza Surveillance Team \(flu@health.gov.au\)](mailto:flu@health.gov.au).

1. Geographic Spread of Influenza Activity

Current activity

Activity level	Laboratory notifications		Influenza outbreaks
Sporadic	Small numbers of lab confirmed influenza detections, not above expected background level ⁺ .	AND	No outbreaks.
Localised	Lab confirmed influenza detections above background level ⁺⁺ in less than 50% of the influenza surveillance region [*] .	OR	Single outbreak only.
Regional	Significant ⁺⁺⁺ numbers of lab confirmed influenza detections above background level in less than 50% of the influenza surveillance region [*] .	OR	>1 outbreaks occurring in less than 50% of the influenza surveillance region ^{**} .
Widespread	Significant ⁺⁺⁺ numbers of lab confirmed influenza detections above background level in equal to or greater than 50% of the influenza surveillance region [*] .	OR	>1 outbreaks occurring in equal to or greater than 50% of the influenza surveillance region ^{**} .

+ Expected background level - defined by jurisdictional epidemiologists; represents the expected low level influenza activity that occurs outside of jurisdictional seasonal activity and is the baseline against which comparisons of change can be based.

++ Above background level - above the expected background level⁺ threshold as defined by jurisdictional epidemiologists.

* Influenza surveillance region within the jurisdiction/area as defined by jurisdictional epidemiologists.

** Areas to be subdivisions of the NT (2 regions), WA (3 regions) and QLD (3 regions) that reflect significant climatic differences within those jurisdictions that result in differences in the timing of seasonal flu activity on a regular basis.

+++ Significant numbers - a second threshold to be determined by the jurisdictional epidemiologists to indicate the level is significantly above the expected background level⁺.

Change in activity level

The change in influenza activity level is based on a comparison of the activity level identified in the current reporting period with the previous period.

Syndromic Surveillance Activity

Syndromic surveillance systems [*]
Evidence of increase in ILI via syndromic surveillance systems
Evidence of unchanged activity in ILI via syndromic surveillance systems
Evidence of a decrease in ILI via syndromic surveillance systems

* Syndromic surveillance systems include GP ILI sentinel surveillance, ED ILI surveillance and FluTracking. The activity indicated by ILI based syndromic surveillance systems may be due to a variety of respiratory viruses. Therefore the report should indicate if other evidence suggests that the increase is suspected to be influenza activity or due to another respiratory pathogen. Syndromic surveillance is reported on a jurisdiction wide basis only.
