20clo Business Intelligence Industry Report:

Perspectives on Business Intelligence Raymond T. Ng, Patricia C. Arocena, Denilson Barbosa, Giuseppe Carenini, 2013-04-01 business intelligence big data business modeling vivification data integration information extraction information visualization **Big Data, Big Analytics** Michael Minelli, Michele Chambers, Ambiga Dhiraj, 2013-01-22 Unique prospective on the big data analytics phenomenon for both business and IT professionals The availability of Big Data low cost commodity hardware and new information management and analytics software has produced a unique moment in the history of business The convergence of these trends means that we have the capabilities required to analyze astonishing data sets quickly and cost effectively for the first time in history These capabilities are neither theoretical nor trivial They represent a genuine leap forward and a clear opportunity to realize enormous gains in terms of efficiency productivity revenue and profitability The Age of Big Data is here and these are truly revolutionary times This timely book looks at cutting edge companies supporting an exciting new generation of business analytics Learn more about the trends in big data and how they are impacting the business world Risk Marketing Healthcare Financial Services etc Explains this new technology and how companies can use them effectively to gather the data that they need and glean critical insights Explores relevant topics such as data privacy data visualization unstructured data crowd sourcing data scientists cloud computing for big data and much more Business Intelligence with Power BI and Tableau: Cloud-Based Data Warehousing, Predictive Analytics, and Artificial Intelligence-Driven Decision Support Sibaram Prasad Panda, Anita Padhy, 2025-08-15 The Advanced Business Intelligence Tools and Techniques for Data Driven Decision Making provides a comprehensive discovery of the modern ecosystem for business intelligence which detects the development from stable reports to dynamic real time analysis A dedicated comparison considers each tool on important dimensions including matrix prices integration skills scalability and purpose which allows informed decisions The book concludes by detecting practical sector specific applications of BI showing how industries to reveal insights into health services from finance to increase efficiency and maintain a competitive management to industries Whether for IT subjects data analysts or business executives this guide acts as a reference and a roadmap to navigate in diverse BI tools **Perspectives on Business Intelligence** Raymond T. Ng, Patricia C. Arocena, Denilson Barbosa, Giuseppe Carenini, 2013-05-09 In the 1980s traditional Business Intelligence BI systems focused on the delivery of reports that describe the state of business activities in the past such as for questions like How did our sales perform during the last quarter A decade later there was a shift to more interactive content that presented how the business was performing at the present time answering questions like How are we doing right now Today the focus of BI users are looking into the future Given what I did before and how I am currently doing this quarter how will I do next quarter Furthermore fuelled by the demands of Big Data BI systems are going through a time of incredible change Predictive analytics high volume data unstructured data social data mobile consumable analytics and data visualization are all examples

of demands and capabilities that have become critical within just the past few years and are growing at an unprecedented pace This book introduces research problems and solutions on various aspects central to next generation BI systems It begins with a chapter on an industry perspective on how BI has evolved and discusses how game changing trends have drastically reshaped the landscape of BI One of the game changers is the shift toward the consumerization of BI tools As a result for BI tools to be successfully used by business users rather than IT departments the tools need a business model rather than a data model One chapter of the book surveys four different types of business modeling However even with the existence of a business model for users to express queries the data that can meet the needs are still captured within a data model The next chapter on vivification addresses the problem of closing the gap which is often significant between the business and the data models Moreover Big Data forces BI systems to integrate and consolidate multiple and often wildly different data sources One chapter gives an overview of several integration architectures for dealing with the challenges that need to be overcome While the book so far focuses on the usual structured relational data the remaining chapters turn to unstructured data an ever increasing and important component of Big Data One chapter on information extraction describes methods for dealing with the extraction of relations from free text and the web Finally BI users need tools to visualize and interpret new and complex types of information in a way that is compelling intuitive but accurate The last chapter gives an overview of information visualization for decision support and text
