Design Concepts for World Championship Grand Prix Motorcycles Alberto Boretti,2012-08-06 The World
Championship Grand Prix WCGP is the premier championship event of motorcycle road racing The WCGP was established in
1949 by the sport s governing body the F d ration Internationale de Motocyclisme FIM and is the oldest world championship
event in the motorsports arena This book developed especially for racing enthusiasts by motorsports engineering expert Dr
Alberto Boretti provides a broad view of WCGP motorcycle racing and vehicles but is primarily focused on the design of four
stroke engines for the MotoGP class The book opens with general background on MotoGP governing bodies and a history of
the event s classes since the competition began in 1949 It then presents some of the key engines that have been developed
and used for the competition through the years Technologies that are used in today s MotoGP engines are discussed A
sidebar discussion on calculating brake indicated and friction performance parameters provides mathematical information
for readers who like such technical details Future developments of MotoGP engines including the use of biofuels and
recovery of thermal and braking energy are presented The introduction concludes with a chart that details the winners of the
various classes of WCGP motorcycle racing since the competition began in 1949 The bulk of the book consists of four
previously published SAE technical papers that were expressly chosen by Dr Boretti to provide greater insight to the
relationships between engine parameters and performance namely the influence on friction and mean effective pressure of
traditional spark ignited four stroke engines tuned for a narrow high power output The first paper provides the reader with a
quick way to estimate the friction loss and engine output The second paper discusses output and fuel consumption of multi
valve motorcycle engines The third paper published in 2002 compares WCGP engines developed to comply with the then new
FIM regulations that allowed four stroke engines in the competition The fourth paper examines specific power densities and
therefore the level of sophistication and costs of MotoGP 800 cm³ engines This paper shows the performance of these as well
as the 1000cc SuperBike engines The fifth paper presents four engine concepts including one for a MotoGP Superbike with 2
and 3 cylinders The sixth paper compares 3 and 4 in line V4 V5 and V6 layouts through 1 D engine simulations The seventh
paper considers the actual operation of 800cc MotoGP engines on the race track where the percentage of the duration in
fully open throttle is less than 20% of the race but the partial throttle is used for as much as 80% of the race The final paper
in the compendium reports on the Honda oval piston engine concept **Instructions for Registration and Application**
