reference Leonard Mayer demystifies one of the most complex architectural specialties. An architect with more than thirty three years experience as a master planner and programmer of laboratories and clinical facilities, Mr. Mayer offers a comprehensive overview of the fundamental issues related to laboratory planning and design. He also provides designers with a clear and rational framework through which to approach this highly challenging and rewarding design specialty. A superb learning tool for students and professionals just getting started in lab design and a valuable one volume reference for the experienced professional, *Design and Planning of Research and Clinical Laboratory Facilities* features step by step guidance through the complex maze of codes, specifications, standards and official guidelines relating to the planning, design and construction processes. New and updated design criteria based on the most recent laws and regulations, master plans, facility programs, functional programs and requirements programs for a wide variety of scientific and medical disciplines and support facilities, comprehensive lists of relevant codes, regulations, standards, guidelines and important architectural structural, mechanical, electrical and plumbing criteria. Research and clinical laboratory facilities are perhaps the most complex structures to plan and design. Intimidated by a vast and seemingly impenetrable body of codes, regulations and design criteria pertaining to lab design and construction, many architects unfortunately choose to avoid what can be one of the most profitable and professionally rewarding areas of specialization. Written by an architect with more than thirty three years of experience as a master planner and programmer of laboratories and clinical facilities, this book demystifies the process of laboratory planning and design. It provides a comprehensive overview of the fundamental issues related to laboratory design and offers readers detailed step by step guidance through the complex maze of design specifications and codes, standards and official guidelines that must be addressed during the programming, planning, design and construction process. Focusing mainly on laboratory programming, planning and design criteria for wet laboratory environments, Leonard Mayer provides examples from numerous master plans, facility programs, functional programs and requirements programs applicable to a wide variety of scientific and medical disciplines and related facilities. Related functions and activities include administrative offices, computer centers, core service and support building services facilities and more. He presents new and updated design criteria based on recent laws and regulations and supplies readers with comprehensive lists of relevant codes, regulations, standards, guidelines and architectural structural, mechanical, electrical and plumbing criteria. *Design and Planning of Research and Clinical Laboratory Facilities* is an excellent primer for architecture students and newcomers to the field as well as an indispensable single volume reference for experienced professionals. It is also an invaluable resource for researchers and investigators, facility planners and managers, plant engineers and all others involved with the design, construction, maintenance and administration of laboratory facilities.
