Mirman, 2006 WHY GOD COULD NOT CREATE THE UNIVERSE WITH A DIFFERENT DIMENSION EVEN IF IT WANTED TO or perhaps anything else Perhaps the universe must be the way it is It seems that what is omnipotent is mathematics elementary arithmetic just counting Yet even mathematics is not powerful enough to create a universe there are just too many conditions conflicting Existence is impossible Beyond that for there to be structure is quite inconceivable But the universe does exist there are galaxies stars even the possibility of life That life is possible merely allows it to exist but only with the greatest good fortune does it actually occur Intelligence is vastly less likely ability and technology far more improbable That we are what we are seem so strange inconceivable that we are left merely with wonder and as we seem unable to realize the need for the deepest care responsibility and gratitude We have been given by the unbelievable benevolence of chance no life but life with the most wondrous part of the universe the ability to think to know to create to wonder and thus the demand that we use our most awesome gifts to protect them to protect and preserve the world in which they exist and the life likely so rare if not unique in the universe which has received these astounding favors of chance that has been given by nature its most exalted constituents What we are requires that we enhance what we are what we are part of to see understand and be grateful An exploration of the precise conditions required for the existence of humans in the universe the author does an admirable job delineating the laws of physics without becoming too bogged down

in complicated jargon and he maintains a sense of wonder about the unique and random nature of the universe He repeatedly celebrates our highly improbable achievements as a species marveling at our ability to use the language of abstract mathematics to unravel the mysteries of existence the prevailing tone of the narrative is clear and confident marked by a meticulous attention to detail An often fascinating journey through the history of the universe and mankind Kirkus Discoveries

Mathematics Lessons to Look Forward To! Jim Noble,2023-03-01 This book is essential for anyone involved or thinking about being involved in teaching and learning mathematics at school It is packed full of practical and fun lesson ideas and activities combining the author s infectious enthusiasm for school mathematics with the relentless challenge of engaging students with the nature of the subject Using humour enthusiasm and years of teaching expertise Jim Noble presents the features and potential of ideas and experiments he has used in his classroom He draws on his extensive experience of using these activities to demonstrate their pros and cons what you might expect and where they might lead In a humorous and engaging account alongside noting successes the author also includes the moments where things have gone slightly awry These experiences and the context are used as a vehicle for thinking about the broader goals and issues of mathematics education and challenging some of the stereotypical misunderstandings Each chapter draws out an important idea for teachers to think about following a basic three part structure The lesson and how it works What happens and why it matters How could it be different Variations and similar tasks Without preaching anything other than the joy of mathematics this intelligent humorous and practical book will act as a catalyst and inspiration for teachers looking to develop their own understanding and practice **Algebra Teacher's Activities Kit** Judith A. Encountering Algebra Cecilia Kilhamn, Roger Säljö, 2019-07-03 The book reports a comparative research project about algebra teaching and learning in four countries Algebra is a central topic of learning across the world and it is well known that it represents a hurdle for many students The book presents analyses built on extensive video recordings of classrooms documenting the first introduction to symbolic algebra students aged 12 to 14 While the content addressed in all classrooms is variables expressions and equations the teaching approaches are diverse The chapters bring the reader into different algebra classrooms discussing issues such as mathematization and social norms the role of mediating tools and designed examples and teacher beliefs By comparing classrooms new insights are generated about how students understand the algebraic content how teachers instruct and how both parties deal with difficulties in learning elementary algebra The book also describes a research methodology using video in search of taken for granted aspects of algebra lessons
