UML 2003 -- The Unified Modeling Language, Modeling Languages and Applications Perdita Stevens, Jon Whittle, Grady Booch, 2003-10-02

The past year has been an eventful one for those interested in software modeling The first major revision of the Unified Modeling Language UML 2.0 is in the process of adoption by the Object Management Group OMG and it makes many long desired additions and improvements to UML At the same time it expands what was already a large language A challenge for both practitioners and researchers is to help smooth the adoption of this new language Increasingly attention is being paid to the use of specialized languages often profiles of UML appropriate for different purposes this is one way to make UML less overwhelming Accordingly the focus of the UML conference is gradually expanding from UML to software modeling in general

Simultaneously model driven development is being pursued as a way of creating the benefits from modeling throughout the software development process. Gradually it is developing from a set of slogans into a reality. Many of the papers in this volume are concerned directly or indirectly with how to make modeling rather than coding the heart of software development and how to realize the resulting benefits of higher level thinking. Much work remains to be done.
