Energy Research and Development Administration,1977 **Old and New Unsolved Problems in Plane Geometry and Number Theory** Victor Klee,Stan Wagon,2020-07-31 Victor Klee and Stan Wagon discuss some of the unsolved problems in number theory and geometry many of which can be understood by readers with a very modest mathematical background The presentation is organized around 24 central problems many of which are accompanied by other related problems The authors place each problem in its historical and mathematical context and the discussion is at the level of undergraduate mathematics Each problem section is presented in two parts The first gives an elementary overview discussing the history and both the solved and unsolved variants of the problem The second part contains more details including a few proofs of related results a wider and deeper survey of what is known about the problem and its relatives and a large collection of references Both parts contain exercises with solutions The book is aimed at both teachers and students of mathematics who want to know more about famous unsolved problems **Mathematical Reviews** ,1999 **Ultimate Load Design of Concrete Structures** V. Iacus,Giuseppe Porro,2021-08-04 Subjective Well Being and Social Media shows how by exploiting the unprecedented amount of information provided by the social networking sites it is possible to build new composite indicators of subjective well being These new social media indicators are complementary to official statistics and surveys whose data are collected at very low temporary and geographical resolution The book also explains in full details how to solve the problem of selection bias coming from social media data Mixing textual analysis machine learning and time series analysis the book also shows how to extract both the structural and the temporary components of subjective well being Cross country analysis confirms that well being is a complex phenomenon that is governed by macroeconomic and health factors ageing temporary shocks and cultural and psychological aspects As an example the last part of the book focuses on the impact of the prolonged stress due to the COVID 19 pandemic on subjective well being in both Japan and Italy Through a data science approach the results show that a consistent and persistent drop occurred throughout 2020 in the overall level of well being in both countries The methodology presented in this book enables social scientists and policy makers to know what people think about the quality of their own life minimizing the bias induced by the interaction between the researcher and the observed individuals being language free it allows for comparing the well being perceived in different linguistic and socio cultural contexts disentangling differences due to objective events and life conditions from dissimilarities related to social norms or language specificities provides a solution to the problem of selection bias in social media data through a

systematic approach based on time space small area estimation models The book comes also with replication R scripts and data Stefano M Iacus is full professor of Statistics at the University of Milan on leave at the Joint Research Centre of the European Commission Former R core member 1999 2017 and R Foundation Member Giuseppe Porro is full professor of Economic Policy at the University of Insubria An earlier version of this project was awarded the Italian Institute of Statistics Google prize for official statistics and big data **A Collection of Technical Papers on Structures and Materials** ,1971
