Acute HIV

Some people get flu-like symptoms a month or two after they've been infected with HIV. These symptoms often go away within a week to a month.

After the acute stage, you can have HIV for many years without feeling sick. It's important to know that you can still spread HIV to others even if you feel well.

AIDS

AIDS is the most serious stage of HIV infection. HIV has severely weakened your immune system, and opportunistic infections are much more likely to make you sick.
