A Guide to Performance and Efficiency Assessment of Industrial Equipment A. K. DAS, P. K. DAS, 2024-05-06 This book is written as a guide to industrial professionals young engineers entrepreneurs and industrialists and other stakeholders who need a huge energy in process industries in different forms through industrial process equipment for several human needs But the performance and efficiency of the equipment are not really taken care of during the operations and processes which may be due to the dearth of proper knowledge or ignorance Because of that a large quantity of energy remains unutilized or wastage causing excess energy costs and subsequently generation of a huge quantity of carbon footprint indirectly which could be saved by proper performance and efficient management and hence our Nature earth could be sustainable In this

book the authors highlighted the performance and loss of efficiency of such industrial equipment during running This attempt has been made to disseminate their sound in depth knowledge and long experience achieved from several industries while working in different fields The book explains the actual energy needed for performance the reason for energy loss and the scope of energy savings which can be possible by proper energy management This book will also be apprehensible for all students of diploma undergraduate post graduate in the stream of electrical mechanical chemical power and all other engineering courses as a textbook as well as a reference book

Air Conditioning with Natural Energy Xianting Li,Xinhua Xu,2024-06-05 Air Conditioning with Natural Energy is a comprehensive examination of the principles theory applications and energy saving performance of newly developed technologies for air conditioning using natural energy Based on the latest research and real world case studies from North America Europe and China the book provides an engineering perspective on the design and application of air conditioning from multiple climates The book is divided into two parts Part I examines the range of air conditioning technologies that use natural energy This includes enhanced treatment technologies for outdoor air such as earth to air heat exchanger fresh air pre handling system using shallow geothermal energy as well as newly developed technologies such as pipe embedded wall nocturnal cooling wall and pipe embedded window systems With particular focus on applications in China Part II provides real world case studies from multiple climatic zones demonstrating the practical application and implementation of these technologies Each case study analyses the carbon emission reduction potential energy saving potential and the operational performance of the technologies Air Conditioning with Natural Energy is an invaluable review of the latest developments in air conditioning technologies for practicing engineers researchers and students involved in the design and implementation of HVAC systems or working in the fields of thermal and mechanical engineering and the sustainable built environment Explains the theory and principles underpinning the latest and most important air conditioning technologies with natural energy Provides a new decision making index and revised degree hours to evaluate the energy saving potential of different air conditioning technologies with natural energy helping readers identify the most suitable air conditioning technology for any climate zone Analyzes the energy saving potential of different technologies from real projects in different climate zones and calculates the contribution of carbon emission reduction that can be achieved globally
