

an equation obtained by equating to zero a sum of a finite number of terms each one of which is a product of positive integral powers (including the zero power) of the variables.

Mathematical statement of equality between algebraic expressions. An expression is algebraic if it involves a finite combination of numbers and variables and algebraic operations (addition, subtraction, multiplication, division, raising to a power, and extracting a root). Two important types of such equations are linear equations, in the form $y = ax + b$, and quadratic equations, in the form $y = ax^2 + bx + c$. A solution is a numerical value that makes the equation a true statement when substituted for a variable. In some cases it may be found using a formula; in others the equation may be rewritten in simpler form. Algebraic equations are particularly useful for modeling real-life phenomena.

Basics of the Equation

The diagram above shows a basic equation. This equation is similar to problems which you may have done in ordinary mathematics such as:

$$__ + 16 = 30$$

You could easily guess that $__$ equals 14 or do $30 - 16$ to find that $__$ equals 14.

In this problem $__$ stood for an

unknown number; in an equation we use variables, or any letter in the alphabet.

When written algebraically the problem would be:

$$x + 16 = 30$$

and the answer should be written:

$$x = 14$$

Solving Equations

These equations can be solved relatively easy and without any formal method. But, as you use equations to solve more complex problems, you will want an easier way to solve them.

Pretend you have a scale like the one shown. On the right side there are 45 pennies and on the left side are 23 pennies and an unknown amount of pennies. The scale is balanced, therefore, we know that there must be an equal amount of weight on each side.

As long as the same operation (addition, subtraction, multiplication, etc.) is done to both sides of the scale, it will remain balanced. To find the unknown amount of pennies of the left side, remove 23 pennies from each side of the scale. This action keeps the scale balanced and isolates the unknown amount. Since the weight (amount of pennies) on both sides of the scale are still equal and the unknown amount is alone, we now know that the unknown amount of pennies on the left side is the same as the remaining amount (22 pennies) on the right side.

Because an equation represents a scale, it can also be manipulated like one. The diagram below shows a simple equation and the steps to solving it.

Initial Equation / Problem

$$x + 23 = 45$$

Subtract 23 from each side

$$x + 23 - 23 = 45 - 23$$

Result / Answer

$$x = 22$$

The diagram below shows a more complex equation. This equation has both a constant and a variable on each side. Again, to solve this you must keep both sides of the equation equal; perform the same operation on each side to get the variable "x" alone. The steps to solving the equation are shown below.

Initial Equation / Problem:

$$x + 23 = 2x + 45$$

Subtract x from each side

$$x - x + 23 = 2x - x + 45$$

Result

$$23 = x + 45$$

Subtract 45 from each side

$$23 - 45 = x + 45 - 45$$

Result

$$-22 = x$$

Answer

$$x = -22$$

Take a look at the equation below. As you can see, after the variable is subtracted from the left and the constants are subtracted from the right, you are still left with 2x on one side.

Initial Equation / Problem

$$x + 23 = 3x + 45$$

Subtract x from each side

$$x - x + 23 = 3x - x + 45$$

Result

$$23 = 2x + 45$$

Subtract 45 from each side

$$23 - 45 = 2x + 45 - 45$$

Result

$$-22 = 2x$$

Switch the left and right sides of the equation

$$2x = -22$$

Algebraic Equations (Speedy Study Guides LLC Publishing, Speedy Publishing LLC, 2014-05) Algebraic equations are a great tool for rationalizing almost any relationship in the real and unreal worlds. The incorporation of algebra allows anyone to relate any one thing to another using a defined and constant standard. Any question about the value of an object or idea can be assigned a variable title. This variable is inserted into a directed algebraic equation with the goal of ascertaining certain values. With algebraic equations it is possible to compare oranges to apples as long as certain constant properties are defined. If X is the universe, Algebra can help anyone compare the universe to an infinite pool of values with any number of goals in mind. Algebraic Equations (Speedy Study Guides) Speedy Publishing LLC, 2015-01-20 Algebra is a complex form of math that has been known to baffle adults and students alike. However, many adults no longer have to deal with algebra, but a lot of middle and high school students do. A study guide will help high school students to understand how to do algebra. They can also use it to practice and to develop their skills in this area of math. [Algebraic Equations And Answers \(Speedy Study Guides\)](#) Speedy Publishing, 2015-01-21

Once students have learned a basic mathematical principle, practicing the formula by rote can help them to cement the principles in their minds for future use. A study guide that contains algebraic questions that exercise the many different formulas can help students develop their understanding of important principles, and the included answers let them check their work and stay on the right track. *Algebraic Equations (Speedy Study Guide)* Speedy Publishing LLC, 2014-09-29

One exceptionally important part of knowing how to do algebra is knowing all of the equations. This can be very difficult for a student who is first learning how to do algebra, and it can be very difficult for one to sit down to learn them. One great way for persons to avoid simply staring at the equation for hours is to use an algebra equation study guide. The guide contains useful exercises a student can do in order to learn the problems. **Algebraic Equations and Answers (Speedy Study Guides)** Speedy Publishing LLC, 2015-01-20
