

18.1 Finding Order in Diversity

Learning Objectives

- LO1** Describe the goals of taxonomic classification and phylogenetics.
- LO2** Identify the levels of the classification system derived by Linnaeus.

Learning Objectives

Assigning Scientific Names Biologists have a great diversity of organisms. Biologists categorize each organism as a taxon. Biologists also use taxonomic hierarchy to group organisms based on their similarities. Biologists use a classification system. The concept of naming and grouping organisms is called **taxonomy**.

Linnaeus (1707–1778) developed a naming system, called **binomial nomenclature**, to classify organisms. Each species is assigned a two-part scientific name.

- The first part of the name refers to the genus, or a group of similar species.
- The second part of the name is unique to each species.

Linnaeus's Classification System Linnaeus's system of classification has seven different levels. Biologists use a group of organisms, called **taxon**, to group organisms. Each of the ranking levels is called a **taxon**.

- Genus is a group of similar species, a family is a group of similar genera.
- An order is a group of similar families.
- A class is a group of similar orders.
- A phylum is a group of similar classes.
- A kingdom is a group of similar phyla.

Discrete Diversity and Dispersion Maximization Rafael Martí, Anna Martínez-Gavara, 2023-11-16 This book demonstrates the metaheuristic methodologies that apply to maximum diversity problems to solve them Maximum diversity problems arise in many practical settings from facility location to social network analysis and constitute an important class of NP hard problems in combinatorial optimization In fact this volume presents a missing link in the combinatorial optimization related literature In providing the basic principles and fundamental ideas of the most successful methodologies for discrete optimization this book allows readers to create their own applications for other discrete optimization problems Additionally the book is designed to be useful and accessible to researchers and practitioners in management science industrial engineering economics and computer science while also extending value to non experts in combinatorial optimization Owed to the tutorials presented in each chapter this book may be used in a master course a doctoral seminar or as supplementary to a primary text in upper undergraduate courses The chapters are divided into three main sections The first section describes a metaheuristic methodology in a tutorial style offering generic descriptions that when applied create an implementation of the methodology for any optimization problem The second section presents the customization of the methodology to a given diversity problem showing how to go from theory to application in creating a heuristic The final part of the chapters is devoted to experimentation describing the results obtained with the heuristic when solving the diversity problem Experiments in the book target the so called MDPLIB set of instances as a benchmark to evaluate the performance of the methods

Centrality and Diversity in Search M.N. Murty, Anirban Biswas, 2019-08-14 The concepts of centrality and diversity are highly important in search algorithms and play central roles in applications of artificial intelligence AI machine learning ML social networks and pattern recognition This work examines the significance of centrality and diversity in representation regression ranking clustering optimization and classification The text is designed to be accessible to a broad readership Requiring only a basic background in undergraduate level mathematics the work is suitable for senior undergraduate and graduate students as well as researchers working in machine learning data mining social networks and pattern recognition

Biology Joseph S. Levine, Kenneth R. Miller, 1998 *Intelligent Decision Technologies* Rui Neves-Silva, Lakhmi C. Jain, Robert J. Howlett, 2015-06-09 This book presents the 57 papers accepted for presentation at the Seventh KES International Conference on Intelligent Decision Technologies KES IDT 2015 held in Sorrento Italy in June 2015 The conference consists of keynote talks oral and poster presentations invited sessions and workshops on the applications and theory of intelligent decision systems and related areas The conference provides an opportunity for the presentation and discussion of interesting new research results promoting knowledge transfer and the generation of new ideas The book will be of interest to all those whose work involves the development and application of intelligent decision systems

Scatter Search Manuel Laguna, Rafael Martí, 2012-12-06 The book Scatter Search by Manuel Laguna and Rafael Martí represents a

long awaited missing link in the literature of evolutionary methods Scatter Search SS together with its generalized form called Path Relinking constitutes the only evolutionary approach that embraces a collection of principles from Tabu Search TS an approach popularly regarded to be divorced from evolutionary procedures The TS perspective which is responsible for introducing adaptive memory strategies into the metaheuristic literature at purposeful level beyond simple inheritance mechanisms may at first seem to be at odds with population based approaches Yet this perspective equips SS with a remarkably effective foundation for solving a wide range of practical problems The successes documented by Scatter Search come not so much from the adoption of adaptive memory in the range of ways proposed in Tabu Search except where as often happens SS is advantageously coupled with TS but from the use of strategic ideas initially proposed for exploiting adaptive memory which blend harmoniously with the structure of Scatter Search From a historical perspective the dedicated use of heuristic strategies both to guide the process of combining solutions and to enhance the quality of offspring has been heralded as a key innovation in evolutionary methods giving rise to what are sometimes called hybrid or memetic evolutionary procedures The underlying processes have been introduced into the mainstream of evolutionary methods such as genetic algorithms for example by a series of gradual steps beginning in the late 1980s

Design of Intelligent Systems Based on Fuzzy Logic, Neural Networks and Nature-Inspired Optimization Patricia Melin, Oscar

Castillo, Janusz Kacprzyk, 2015-06-12 This book presents recent advances on the design of intelligent systems based on fuzzy logic neural networks and nature inspired optimization and their application in areas such as intelligent control and robotics pattern recognition time series prediction and optimization of complex problems The book is organized in eight main parts which contain a group of papers around a similar subject The first part consists of papers with the main theme of theoretical aspects of fuzzy logic which basically consists of papers that propose new concepts and algorithms based on fuzzy systems The second part contains papers with the main theme of neural networks theory which are basically papers dealing with new concepts and algorithms in neural networks The third part contains papers describing applications of neural networks in diverse areas such as time series prediction and pattern recognition The fourth part contains papers describing new nature inspired optimization algorithms The fifth part presents diverse applications of nature inspired optimization algorithms The sixth part contains papers describing new optimization algorithms The seventh part contains papers describing applications of fuzzy logic in diverse areas such as time series prediction and pattern recognition Finally the eighth part contains papers that present enhancements to meta heuristics based on fuzzy logic techniques
