

10.3 Circle Arcs Measuring Angles and Arcs

Angles and Arcs In a circle, an **angle** whose vertex is at the center is called a **central angle**. The **arc** between the two radii is called an **arc**. Angles measured in degrees are written as $^\circ$ and arcs are written as $\overset{\frown}{AB}$.

There are three properties of central angles and arcs:

- The **arc** between the radii of two central angles will have the **same** measure as the **angle** between the radii.
- The **measure** of a **minor arc** is less than 180° and equal to the **measure** of its **central angle**.
- The **measure** of a **major arc** is 360° minus the **measure** of its **central angle**.
