Genetic Programming Theory and Practice II Una-May O'Reilly, Tina Yu, Rick Riolo, Bill Worzel, 2006-03-16 The work described in this book was first presented at the Second Workshop on Genetic Programming Theory and Practice organized by the Center for the Study of Complex Systems at the University of Michigan Ann Arbor 13 15 May 2004 The goal of this workshop series is to promote the exchange of research results and ideas between those who focus on Genetic Programming GP theory and those who focus on the application of GP to various re world problems In order to facilitate these interactions the number of talks and participants was small and the time for discussion was large Further participants were asked to review each other s chapters before the workshop Those reviewer comments as well as discussion at the workshop are reflected in the chapters presented in this book Additional information about the workshop addendums to chapters and a site for continuing discussions by participants and by others can be found at <http://cscs.umich.edu/8000/GPTP> 20041 We thank all the workshop participants for making the workshop an exciting and productive three days In particular we thank all the authors without whose hard work and creative talents neither the workshop nor the book would be possible We also thank our keynote speakers Lawrence Dave Davis of NuTech Solutions Inc Jordan Pollack of Brandeis University and Richard Lenski of Michigan State University who delivered three thought provoking speeches that inspired a great deal of discussion among the participants

Introduction to Analog VLSI Design Automation Mohammed Ismail, José E. Franca, 2012-12-06 Very large scale integration VLSI technologies are now maturing with a current emphasis toward submicron structures and sophisticated applications combining digital as well as analog circuits on a single chip Abundant examples are found on today s advanced systems for telecom munications robotics automotive electronics image processing intelli gent sensors etc Exciting new applications are being unveiled in the field of neural computing where the massive use of analog digital VLSI technologies

will have a significant impact To match such a fast technological trend towards single chip analog digital VLSI systems researchers worldwide have long realized the vital need of producing advanced computer aided tools for designing both digital and analog circuits and systems for silicon integration Architecture and circuit compilation device sizing and the layout generation are but a few familiar tasks on the world of digital integrated circuit design which can be efficiently accomplished by matured computer aided tools In contrast the art of tools for designing and producing analog or even analog digital integrated circuits is quite primitive and still lacking the industrial penetration and acceptance already achieved by digital counterparts In fact analog design is commonly perceived to be one of the most knowledge intensive design tasks and analog circuits are still designed largely by hand by expert intimately familiar with nuances of the target application and integrated circuit fabrication process The techniques needed to build good analog circuits seem to exist solely as expertise invested in individual designers
