Sustainable Forest Management John L. Innes, Anna V. Tikina, 2016-12-19 Sustainable Forest Management provides the necessary material to educate students about forestry and the contemporary role of forests in ecosystems and society This comprehensive textbook on the concept and practice of sustainable forest management sets the standard for practice worldwide Early chapters concentrate on conceptual aspects relating sustainable forestry management to international policy In particular they consider the concept of criteria and indicators and how this has determined the practice of forest management taken here to be the management of forested lands and of all ecosystems present on such lands Later chapters are more practical in focus concentrating on the management of the many values associated with forests Overall the book provides a major new synthesis which will serve as a textbook for undergraduates of forestry as well as those from related disciplines such as ecology or geography who are taking a course in forests or natural resource management

Mechanical Signaling in Plants: From Perception to Consequences for Growth and Morphogenesis (Thigmomorphogenesis) and Ecological Significance Catherine Coutand, Stephen J. Mitchell, Sara Puijalon, Gabrielle Monshausen, 2017-01-27 During the 1970s renewed interest in plant mechanical signaling led to the discovery that plants subjected to mechanical stimulation develop shorter and thicker axes than undisturbed plants a syndrome called thigmomorphogenesis Currently mechanosensing is being intensively studied because of its involvement in many physiological processes in plants and particularly in the control of plant morphogenesis From an ecological point of view the shaping of plant architecture has to be precisely organized in space to ensure light capture as well as mechanical stability In natural environments terrestrial plants are subjected to mechanical stimulation mainly due to wind but also due to precipitation while aquatic and marine plants are subjected to current and wave energy Plants acclimate to mechanically

challenging environments by sensing mechanical stimulations and modifying their growth in length and diameter and their tissue properties to reduce potential for buckling or breakage From a morphogenetic point of view both external and internal mechanical cues play an important role in the control of cell division and meristem development likely by modulating microtubule orientation How mechanical stimulations are being sensed by plants is an area of intense research Different types of mechanosensors have been discovered or proposed including ion channels gated by membrane tension stretch activation and plasma membrane receptor like kinases that monitor the cell wall deformations Electrophysiologists have measured the conductances of some stretch activated channels and have showed that SAC of different structures can exhibit different conductances The role of these differences in conductance has not yet been established Once a mechanical stimulus has been perceived it must be converted into a biological signal that can lead to variations of plant phenotype Calcium has been shown to function as an early second messenger tightly linked with changes in cytosolic and apoplastic pH Transcriptional analyses of the effect of mechanical stimulation have revealed a considerable number of differentially expressed genes some of which appear to be specific to mechanical signal transduction These genes can thus serve as markers of mechanosensing for example in studies attempting to define signalling threshold or variations of mechanosensitivity accommodation Quantitative biomechanical studies have lead to a model of mechanoperception which links mechanical state and plant responses and provides an integrative tool to study the regulation of mechanosensing This model includes parameters sensitivity and threshold that can be estimated experimentally It has also been shown that plants are desensitized when exposed to multiple mechanical signals as a function of their mechanical history Finally mechanosensing is also involved in osmoregulation or cell expansion The links between these different processes involving mechanical signalling need further investigation This frontier research topic provides an overview of the different aspects of mechanical signaling in plants spanning perception effects on plant growth and morphogenesis and broad ecological significance

Dynamical Models of Biology and Medicine Yang Kuang, Meng Fan, Shengqiang Liu, Wanbiao Ma, 2019-10-04 Mathematical and computational modeling approaches in biological and medical research are experiencing rapid growth globally This Special Issue Book intends to scratch the surface of this exciting phenomenon The subject areas covered involve general mathematical methods and their applications in biology and medicine with an emphasis on work related to mathematical and computational modeling of the complex dynamics observed in biological and medical research Fourteen rigorously reviewed papers were included in this Special Issue These papers cover several timely topics relating to classical population biology fundamental biology and modern medicine While the authors of these papers dealt with very different modeling questions they were all motivated by specific applications in biology and medicine and employed innovative mathematical and computational methods to study the complex dynamics of their models We hope that these papers detail case studies that will inspire many additional mathematical modeling efforts in biology and medicine **Wings**

This Mortal Coil Fay Bound Alberti, 2016 Hamlet's mortal coil which eventually and inevitably we shuffle off when we enter the sleep of death as he puts it has never been static Indeed how the human body and its component parts have been understood individually and collectively has shifted across time shaped by culture religion and technology In this probing and provocative new book Fay Bound Alberti uses the global histories of medicine pathology and emotions to explore these changing notions Each chapter uses a different focus bones skin sexual organs spine tongue heart revealing how each body part connects to a peculiarly Western notion of expertise one which appropriates one element from the others and ignores their interconnection The themes examined in This Mortal Coil the nature of identity the relationship between the brain and the heart and the gendering of our physical and emotional selves are enduring ones but perceptions of the perfect body or perfect health evolve constantly Moving between the surface and what lies beneath Alberti provides a rich and fascinating accounting of each part shedding light on the role scientific developments from medical care to plastic surgery to cloning plays in how we look at ourselves Written with insight and narrative verve Alberti's provocative book reveals how the mortal coil can be unwound and looked at as if for the first time

Fat and Furious Breanne Fahs, 2025-08-19 A bold takedown of the ways women are terrorized about fatness and a treatise on the revolutionary power of fat fury Anti fatness and fat shaming are used most often as a way to inspire fear in others about being or becoming fat Scholar and therapist Breanne Fahs breaks down how the dread of fatness is used to control and capitalize on women's fears of their unruly bodies and demonstrates how rejecting shame and instead igniting feelings of anger can help us collectively move towards justice Weaving together the voices of fat people and activists with damning psychological and sociological evidence Fahs chronicles how fat oppression and fear mongering impacts every aspect of our lives from media representation to workplace and healthcare discrimination to the problem with body positivity movements and even how we handle fat death She argues that rage or fat fury becomes the necessary antidote to the resignation and powerlessness that anti fatness so often generates Illuminating and infuriating Fahs intertwines the personal and systemic impacts of anti fatness and calls on all of us fatter and thinner alike to reflect and
