Design and Analysis of Gauge R&R Studies Richard K. Burdick, Connie M. Borror, Douglas C. Montgomery, 2005-01-01

This book provides a protocol for conducting gauge repeatability and reproducibility R R experiments Such an experiment is required whenever a new test system is developed to monitor a manufacturing process The protocol presented here is used to determine if the testing system is capable of monitoring the manufacturing process with the desired level of accuracy and precision This protocol is not currently available in other books or technical reports In addition to providing a protocol for testing a measurement system the book presents an up to date summary of methods used to construct confidence intervals in normal based random and mixed analysis of variance ANOVA models Thus this comprehensive book will be useful to scientists in all fields of application who wish to construct interval estimates for ANOVA model parameters It includes approaches that can be applied to any ANOVA model and because it contains detailed examples of all computations practitioners will be able to easily apply the methods The book describes methods for constructing two types of confidence intervals modified large sample MLS and generalized confidence intervals Computer codes written in SAS and Excel are provided to perform the computations Appendices are included for readers who are unfamiliar with confidence intervals or lack a basic understanding of random and mixed ANOVA models

Process Quality Control Ellis R. Ott, Edward G. Schilling, Dean V. Neubauer, 2005-02-08 Ellis Ott taught generations of quality practitioners to be explorers of the truth through the collection and graphical portrayal of data. From a simple plea to plot the data to devising a graphical analytical tool called the analysis of means ANOM, Ott demonstrated that process knowledge is to be gained by seeking the information contained within the data. In this newest version of Ott's classic text, the

authors have strived to continue down the path that he created for others to follow Additions to this revised edition include the use of dot plots as an alternative to histograms digidot plots adding events to charts emphasis on the role that acceptance control charts play in controlling risks and the computation of average run length ARL a new chapter devoted to process capability process performance and process improvement including the use of confidence intervals for process capability metrics narrow limit gauging as another means of assessing the capability of a process Six Sigma methodology design resolution scatter plot matrices as applied to datasets of higher dimensions and a new chapter on measurement studies

Attribute Measurement System Work for You William D. Mawby, 2006-06-30 The motivation for this book comes from the author's extensive experience with trying to apply the standard measurement systems analysis methods to real world problems that arise in manufacturing and industry. The methods work well for simple systems that are not dynamic and have only two significant sources of error but leave a lot to be desired in other circumstances. This shortfall is especially clear in the case of attribute measurement systems analysis in which the standard method is far from adequate. This book provides clear procedures for situations in which the part values change or are destroyed. It also provides procedures that work when the measurements are dynamic and cannot be separated from the process. It extends the simple methods to cases in which the measurement systems have several sources of uncertainty. And it completely overhauls the attribute methodology and enables it for many difficult but practical applications. Each extension of the method is detailed in a chapter complete with realistic examples and end of chapter summaries called Take Home Pay which clue the reader into the key points that are critical for the attempt to enable bottom line success. The reader who uses these methods will find that they can quickly make significant improvement in their destructive dynamic and attribute measurement systems with less effort.
