In Sully's Challenge: Miracle on the Hudson Official Investigation Full Report of the Federal Agency the National Transportation Safety Board meticulously presents an exhaustive account of the 2009 emergency landing of US Airways Flight 1549 on the Hudson River. This book is a factual chronicle that intricately details the investigative process incorporating eyewitness accounts, cockpit recordings and expert analyses. Its literary style is formal yet accessible, designed to impart critical insights not only for aviation specialists but also for the general public, thereby placing the event in the broader context of aviation safety and human perseverance. The NTSB, an independent federal agency that conducts thorough investigations into transportation incidents, draws upon an extensive history of invaluable lessons learned from prior aviation mishaps. By systematically examining the factors that contributed to the successful water landing orchestrated by Captain Chesley Sully Sullenberger, the report serves as a pivotal case study in both pilot decision making and crisis management, showcasing the agency's commitment to transparency and safety improvement. Sully's Challenge is essential reading for aviation enthusiasts, students of safety protocol and anyone seeking inspiration from stories of crisis aversion. It not only documents a remarkable event in modern history but also highlights the importance of preparedness and decisive action in life-threatening situations.

Diccionario Inglés Técnico Aeronáutico Facundo Conforti, Augusto DeSantis, La industria aeroespacial es la segunda actividad más normada luego de las actividades nucleares, esta regida por infinidad de normas, reglamentaciones, directivas, documentación específica y todo tipo de manuales de referencia obligatoria. La gran mayoría llega a manos de usuarios, operadores, talleristas, etc. en idioma inglés, el idioma de uso aeronáutico por naturaleza. A ello se suma el hecho de que la industria aeronáutica no está aislada de las actividades humanas sino que interactúa y hace su aporte a ellas creando la necesidad de un sólido vínculo interdisciplinario. Ahora bien, si bien conocemos la existencia de esta necesidad de creación de un fuerte vínculo interdisciplinario también sabemos que en esta tarea nos encontramos con una gran barrera: en el mismo la comunicación. A partir de esto es posible considerar varios impedimentos en esa barrera. Uno de los más importantes es el idioma como factor concurrente: está el uso de regionalismos y como consecuencia de ellos la aplicación de jergas específicas. Desde los albores de la aviación hemos convivido con ese problema: sucede que al incrementarse día a día el número de operaciones, al crecer el parque aeronáutico y convertirse la aviación en una necesidad para el resto de las actividades humanas, las condiciones inseguras, los incidentes y los accidentes continúan produciéndose quedando de manifiesto las falencias de la industria en ese aspecto. Las nuevas tecnologías en materiales, los nuevos métodos de diseño y los planes de mantenimiento con técnicas de inspección no destructivas han reducido los riesgos latentes de fallas técnicas pero no todos los aspectos relacionados con la vida humana pueden solucionarlos. La tecnología por lo que en paralelo con los desarrollos tecnológicos se han creado conceptos de gestión del factor humano que han contribuido en gran medida a la seguridad operacional y desde el año 1978 su estudio y prevención se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interacción antropológica
